## **Becoming An Outstanding Mathematics Teacher:**

*Becoming an Outstanding Mathematics Teacher* Jayne Bartlett, 2013-07-24 Raising standards in mathematics is high on government education agendas and remains a key priority for schools. Schools strive to provide an outstanding education for their pupils preparing them to compete not only in a national but an international market. At the heart of this is the classroom and the classroom teacher. So how do you plan lessons that engage and motivate students and what makes a mathematics lesson outstanding? *Becoming an Outstanding Mathematics Teacher* aims to help teachers develop approaches to teaching and learning that take into account individual students' needs and abilities to best facilitate learning. Taking a fresh approach, it offers a wide range of techniques for planning lessons that allow them to use current resources including themselves in a more innovative way to produce outstanding results. With a strong focus on activating learning and supporting pupils as they connect mathematical concepts and processes and develop their individual learning journeys, the book covers a step by step approach to planning for learning, Assessment for learning and planning for progress, Developing effective questioning strategies to promote thinking skills in pupils, Techniques for differentiation to ensure all pupils make progress, Using the classroom environment to develop a culture of learning. Packed full of practical strategies and activities that are easy to implement and including sample lesson plans, this timely new book is essential reading for newly qualified and experienced mathematics teachers that want to ensure outstanding teaching and learning in their classrooms.

*Letters to a Young Math Teacher* Gerald R. Rising, Raymond A. Patenaude, 2013-12-13 ABOUT THIS BOOK *Letters to a Young Math Teacher* is designed to inform beginning teachers about the real world of schools and to assist them with the difficult transition from student to teacher. This is not a methods book but rather supplements those texts to address immediate problems related to such topics as the school environment and discipline, textbooks and curriculum, classroom and standardized testing and interactions with students, colleagues, administrators and parents. Also included is a listing of useful supplemental and personal texts. The publisher is William R Parks [www.wrparks.com](http://www.wrparks.com). The printer is CreateSpace, an affiliate of Amazon.com. There are about 12 500 new math teachers who enter school classrooms each year. This book is designed to help these young men and women to meet the real world of the school and classroom. Author Gerald Rising stated: 'What we have written in this book is not a methods text. It is instead designed separately from such texts to assist the neophyte teacher as he or she enters the real world of the schools based on our own experiences in urban, rural and suburban schools and my additional decades of work with math teachers. Contemporary methods texts do not address these problems. Instead they talk about the interpretation of mathematics content and the application of psychological principles to the design of instruction. Student teaching only partly makes up for this. The organization and discipline of the classroom is that of the sponsoring teacher.'
