**Mathematical Subjects** Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children s mathematical achievement against identified benchmarks and each other

**Digital Technology and Artificial Intelligence in Mathematics Education Assessment** Eirini Geraniou, Cosette Crisan, Manolis Mavrikis, 2026-01-22 This timely and thought provoking book explores how artificial intelligence AI and digital technologies more generally are reshaping educational assessment in the field of mathematics It brings together a rich collection of international perspectives that offer a diverse and critical examination of the opportunities and challenges that digital technologies including artificial intelligence play in assessment The chapters span a broad range of topics including the transition to a digital assessment format designing multiple choice items and the use of AI for automated diagnosis example generation and feedback provision The book includes a framing chapter that critically examines current trends in the field and offers key recommendations for rethinking assessment It calls for more empirical research and a fundamental rethink of assessment practices in light of digital technologies and AI The volume as a whole also invites readers to engage in a broader conversation about the future of educational assessment and the role of digital technologies in transforming assessment in mathematics education This essential resource for educators researchers curriculum developers policymakers and assessment stakeholders offers a comprehensive look at the evolving international landscape of assessment in mathematics education in the digital era It also highlights directions for future research and encourages readers to shaping the future of digital technology and artificial intelligence in formative and summative assessment in mathematics
