**Bayesian Modelling** Peter Congdon,2014-05-23 This book provides an accessible approach to Bayesian computing and data analysis with an emphasis on the interpretation of real data sets Following in the tradition of the successful first edition this book aims to make a wide range of statistical modeling applications accessible using tested code that can be readily adapted to the reader's own applications The second edition has been thoroughly reworked and updated to take account of advances in the field A new set of worked examples is included The novel aspect of the first edition was the coverage of statistical modeling using WinBUGS and OPENBUGS This feature continues in the new edition along with examples using R to broaden appeal and for completeness of coverage

*Case Studies in Applied Bayesian Data Science* Kerrie L. Mengerson,Pierre Pudlo,Christian P. Robert,2020-05-28 Presenting a range of substantive applied problems within Bayesian Statistics along with their Bayesian solutions this book arises from a research program at CIRM in France in the second semester of 2018 which supported Kerrie Mengerson as a visiting Jean Morlet Chair and Pierre Pudlo as the local Research Professor The field of Bayesian statistics has exploded over the past thirty years and is now an established field of research in mathematical statistics and computer science a key component of data science and an underpinning methodology in many domains of science business and social science Moreover while remaining naturally entwined the three arms of Bayesian statistics namely modelling computation and inference have grown into independent research fields While the research arms of Bayesian statistics continue to grow in many directions they are harnessed when attention turns to solving substantive applied problems Each such problem set has its own challenges and hence draws from the suite of research a bespoke solution The book will be useful for both theoretical and applied statisticians as well as practitioners to inspect these solutions in the context of the problems in order to draw further understanding awareness and inspiration
