**An Intelligent Inspection Planning System for Prismatic Parts on CMMs** Slavenko M. Stojadinović, Vidosav D. Majstorović, 2019-02-09 This book examines an intelligent system for the inspection planning of prismatic parts on coordinate measuring machines (CMMs). The content focuses on four main elements: the engineering ontology, the model of inspection planning for prismatic parts on CMMs, the optimisation model of the measuring path based on an ant colony approach, and the model of probe configuration and setup planning based on a genetic algorithm. The model of inspection planning for CMMs developed here addresses inspection feature construction, the sampling strategy, probe accessibility analysis, automated collision free operation, and probe path planning. The proposed model offers a novel approach to intelligent inspection while also minimizing human involvement and thus the risk of human error through intelligent planning of the probe configuration and part setup. The advantages of this approach include reduced preparation times due to the automatic generation of a measuring protocol, potential optimisation of the measuring probe path (i.e. less time needed for the actual measurement), and increased planning process autonomy through minimal human involvement in the setup analysis and probe configuration.

**Novel Methodologies for Digital Investigations of Clothing-Body-Interactions** Ann-Malin Schmidt, 2025-11-19 This book presents an advanced methodology for developing tightly fitting clothing using automated 4D scan data analysis and individualized deformable human body Finite Element models (ID HBM). It introduces generalized methods for automatic 4D scan data processing, enabling body deformation and clothing-body interaction analysis. By leveraging 4D scan data, it enhances the comparability of static and dynamic movements, facilitating the creation of both static and dynamic ID HBM clothing FE models. These

approaches are applied to study breast bra interactions comparing different bras on test subjects The book also develops and validates static and dynamic FEM models for breast bra interaction assessing variations in bra fit pressure distribution and dynamic behavior through pressure measurements and 4D scan data analysis
