The Solution of Compressible Laminar Boundary Layer Problems by a Finite Difference Method Donald Charles Baxter, 1957

Introduction to Integral Equations with Applications Abdul J.

Jerri, 1999-09-03 From the reviews of the First Edition: Extremely clear self-contained text offers to a wide class of readers the theoretical foundations and the modern numerical methods of the theory of linear integral equations. *Revue Roumaine de Mathématiques Pures et Appliquées* Abdul Jerri has revised his highly applied book to make it even more useful for scientists and engineers as well as mathematicians. Covering the fundamental ideas and techniques at a level accessible to anyone with a solid undergraduate background in calculus and differential equations, Dr Jerri clearly demonstrates how to use integral equations to solve real world engineering and physics problems. This edition provides precise guidelines to the basic methods of solutions, details more varied numerical methods and substantially boosts the total of practical examples and exercises. Plus it features added emphasis on the basic theorems for the existence and uniqueness of solutions of integral equations and points out the interrelation between differentiation and integration. Other features include: A new section on integral equations in higher dimensions; An improved presentation of the Laplace and Fourier transforms; A new detailed section for Fredholm integral equations of the first kind; A new chapter covering the basic higher quadrature numerical integration rules; A concise introduction to linear and nonlinear integral equations; Clear examples of singular integral equations and their solutions; A student's solutions manual available directly from the author.

Mathematical Methods in Physics and Engineering John W. Dettman, 1988-01-01 Algebraically based approach to vectors, mapping, diffraction and other topics in applied math also covers generalized functions, analytic function theory and more. Additional topics include sections on linear algebra, Hilbert spaces, calculus of variations, boundary value problems, integral equations, analytic function theory and integral transform methods. Exercises. 1969 edition.
