Iterated Maps on the Interval as Dynamical Systems Pierre

Collet,J.-P. Eckmann,2009-08-25 Iterations of continuous maps of an interval to itself serve as the simplest examples of models for dynamical systems These models present an interesting mathematical structure going far beyond the simple equilibrium solutions one might expect If in addition the dynamical system depends on an experimentally controllable parameter there is a corresponding mathematical structure revealing a great deal about interrelations between the behavior for different parameter values This work explains some of the early results of this theory to mathematicians and theoretical physicists with the additional hope of stimulating experimentalists to look for more of these general phenomena of beautiful regularity which oftentimes seem to appear near the much less understood chaotic systems Although continuous maps of an interval to itself seem to have been first introduced to model biological systems they can be found as models in most natural sciences as well as economics Iterated Maps on the Interval as Dynamical Systems is a classic reference used widely by researchers and graduate students in mathematics and physics opening up some new perspectives on the study of dynamical systems

**Iteration Theory - Proceedings Of The European Conference** C Simo,Christian Mira,Gyoergy

*Formation of Space-Time Structures and Criticality* T. Riste,David Sherrington,2012-12-06 This volume contains the proceedings of a NATO Advanced study Institute held at Geilo Norway between 2 12 april 1991 This institute was the eleventh in a series held biannually at Geilo on the subject of phase transitions It was intended to capture the latest ideas on selforganized patterns and criticality The Institute brought together many lecturers students and active researchers in the field from a wide range of NATO and non NATO countries The main financial support came from the NATO scientific Affairs Division but additional support was obtained from the Norwegian Research Council for Science and the Humanities NAVF and Institutt for energi teknikk The organizers would like to thank all these contributors for their help in promoting an exciting and rewarding meeting and in doing so are confident that they echo the appreciation of all the participants In cooperative equilibrium systems physical states are described by spatio temporal correlation functions The intimate connection between space and time correlations is especially apparent at the critical point the second order phase transition where the spatial range and the decay time of the correlation function both become infinite The salient features of critical phenomena and the history of the development of this field of science are treated in the first chapter of this book

This book introduces a comprehensive framework tailored for dissecting complex systems across diverse disciplines What defines a complex system How can we harness information to quantify its order structure and intricacy Delving into phenomena from the intricate processes in physical systems to the dynamic behaviours in cellular automata and pattern formation readers will uncover the profound interplay between physics and information theory This intricate relationship provides fresh insight into physical phenomena reimagining them through the lens of information Notably the book demystifies how seemingly opposing forces rising order and increasing disorder coexist ultimately shedding light on the second law of thermodynamics as an outcome of deterministic reversible dynamics beneath the surface Geared towards graduate students this book presumes an undergraduate foundation in mathematics and physics ensuring a deep engaging exploration for its readers

### **Dynamics**

**Reported** ,1995 DYNAMICS REPORTED reports on recent developments in dynamical systems Dynamical systems of course

originated from ordinary differential equations Today dynamical systems cover a much larger area including dynamical processes described by functional and integral equations by partial and stochastic differential equations etc Dynamical systems have involved remarkably in recent years A wealth of new phenomena new ideas and new techniques are proving to be of considerable interest to scientists in rather different fields It is not surprising that thousands of publications on the theory itself and on its various applications are appearing DYNAMICS REPORTED presents carefully written articles on

major subjects in dynamical systems and their applications addressed not only to specialists but also to a broader range of readers including graduate students. Topics are advanced while detailed exposition of ideas restriction to typical results rather than the most general one and last but not least lucid proofs help to gain the utmost degree of clarity. It is hoped that DYNAMICS REPORTED will be useful for those entering the field and will stimulate an exchange of ideas among those working in dynamical systems.
