## Answers from the Tradition

**Goal 1: Learner will develop abilities necessary to do and understand scientific inquiry.**

28-32%

### 1.01 Identify biological problems and questions that can be answered through scientific investigations.

## The Scientific Method

1. List and describe the steps of the **Scientific Method**. Make sure you include **observations**, creating a **testable hypothesis**, **identifying variables**, **data**, having an **adequate sample**, & **replicating your findings**.  
*Purpose/Question, Observation, Hypothesis, Experiment (independent, dependent and controls), Data and Analysis, Communicating Findings, Replicating/Repeating the experiment.*
2. Why do many experiments make use of a **control group**? *Used as a basis of comparison, normal*
3. What are the characteristics of a good experiment? *Large sample size, one variable tested at a time.*
4. What is the difference between an **inference** and a **prediction**? *An inference is a logical interpretation based upon prior knowledge or experiences. A prediction is based upon direct observations.*
5. What are the differences between **hypothesis**, **theory** and **law**?  
*Hypothesis – suggested outcome to a scientific question. Theory – a well supported hypothesis that unifies a broad range of indirect observations. Law – A documented hypothesis supported by direct evidence.*
6. What is the difference between an **independent** and **dependent** variable? *The independent variable (manipulated variable) is what the scientist changes in an experiment. The dependent variable (responding variable) changes as a result of the independent variable.*
7. Interpret graphs. Which axis has the independent variable? Which axis has the dependent variable? When do you use a **bar graph**? **A line graph**? **A pie graph**? (X,Y) *Bar graphs are used for comparisons, line graphs show change over time and pie graphs show a representation of something to the whole.*

### **Tools of a Biologist: Things to know about Microscopes**

8. How do you determine the magnification of the field of view for a microscope? You multiply the eyepiece by the objective lens.
9. What happens to the diameter of the field of view when you change from low to high power? It gets much smaller.
10. How do you estimate the size of a cell or cell structure when using a microscope?  
*Micrometers (1.3 mm (millimeters) would be 1300 micrometers)*
11. What do you adjust first on a microscope? What you then adjust when on the highest power? You adjust it on low power with the course adjustment, then use the higher power and the fine adjustment.

1.2 Design and conduct scientific investigations to answer biological questions (create testable hypotheses, identify variables, use a control or comparison group when appropriate, select and use appropriate measurement tools, collect and record data, organize data into charts and graphs, analyze and interpret data, communicate findings).  
12. Graph this data. 13. What is the independent variable? Temperature

The dependent variable? Rate at which grill opens and closes
