### **A Comparison of Facilitating Versus Traditional Teaching in Advanced Functions and Modeling Classes**

Beatrice B. Lyons,2012 To ease the transition from high school to college the decision was made to use the method of facilitative teaching and learning in the Advanced Functions and Modeling classes **Active Matter** Skylar

Tibbits,2017-09-29 The first book on active matter an emerging field focused on programming physical materials to assemble themselves transform autonomously and react to information The past few decades brought a revolution in computer software and hardware today we are on the cusp of a materials revolution If yesterday we programmed computers and other machines today we program matter itself This has created new capabilities in design computing and fabrication which allow us to program proteins and bacteria to generate self transforming wood products and architectural details and to create clothing from intelligent textiles that grow themselves This book offers essays and sample projects from the front lines of the emerging field of active matter Active matter and programmable materials are at the intersection of science art design and engineering with applications in fields from biology and computer science to architecture and fashion These essays contextualize current work and explore recent research Sample projects generously illustrated in color show the range of possibilities envisioned by their makers Contributors explore the design of active material at scales from nano to micro kilo and even planetary They investigate processes of self assembly at a microscopic level test new materials that can sense and actuate themselves and examine the potential of active matter in the built environment and in living and artificial systems Active Matter is an essential guide to a field that could shape the future of design **Advanced Topics on Cellular**

### **Self-organizing Nets and Chaotic Nonlinear Dynamics to Model and Control Complex Systems** Riccardo

Caponetto,Luigi Fortuna,Mattia Frasca,2008 This book focuses on the research topics investigated during the three year research project funded by the Italian Ministero dell Istruzione dell Universit e della Ricerca MIUR Ministry of Education University and Research under the FIRB project RBNE01CW3M With the aim of introducing newer perspectives of the research on complexity the final results of the project are presented after a general introduction to the subject The book is intended to provide researchers PhD students and people involved in research projects in companies with the basic fundamentals of complex systems and the advanced project results recently obtained **Computational Modeling of Multilevel Organisational Learning and Its Control Using Self-modeling Network Models** Gülay Canbaloglu,Jan Treur,Anna

Wiewiora,2023-06-16 Although there is much literature on organisational learning mathematical formalisation and computational simulation there is no literature that uses mathematical modelling and simulation to represent and explore different facets of multilevel learning This book provides an overview of recent work on mathematical formalisation and computational simulation of multilevel organisational learning by exploiting the possibilities of self modeling network models to address it This is the first book addressing mathematical formalisation and computational modeling of multilevel

organisational learning in a systematic principled manner A self modeling network modeling approach from AI and Network Science is used where in a reflective manner some of the network nodes called self model nodes represent parts of the network s own network structure characteristics This is supported by a dedicated software environment allowing to design and implement higher order adaptive network models by specifying them in a conceptual manner at a high level of abstraction in a standard table format without any need of algorithmic specification or programming This modeling approach allows to model the development of knowledge in an organisational setting in a neatly structured manner at three different levels for the usage adaptation and control respectively of the underlying mental models Several examples of realistic cases of multilevel organisational learning are used to illustrate the approach Crucial concepts such as the aggregation of mental models to form shared mental models out of individual mental models are addressed extensively It is shown how to model context sensitive control of organisational learning taking into account a wide variety of context factors for example relating to levels of expertise of individuals or to leadership styles of managers involved Mathematical equilibrium analysis of models of organisational learning is also addressed among others allowing verification of correctness of the implemental models in comparison to their conceptual design Chapters in this book also contribute to the Management and Business Sciences research by demonstrating how computational modeling can be used to capture complex management phenomena such as multilevel organizational learning This book has a potential implication for practice by demonstrating how computational modeling can be used to capture learning scenarios which then provide a basis for more informed managerial decisions

**Simulation-driven Design Optimization And Modeling For Microwave Engineering** Qi-jun Zhang,2013-03-14 Computer aided full wave electromagnetic EM analysis has been used in microwave engineering for the past decade Initially its main application area was design verification Today EM simulation driven optimization and design closure become increasingly important due to the complexity of microwave structures and increasing demands for accuracy In many situations theoretical models of microwave structures can only be used to yield the initial designs that need to be further fine

tuned to meet given performance requirements In addition EM based design is a must for a growing number of microwave devices such as ultra wideband UWB antennas dielectric resonator antennas and substrate integrated circuits For circuits like these no design ready theoretical models are available so design improvement can only be obtained through geometry adjustments based on repetitive time consuming simulations On the other hand various interactions between microwave devices and their environment such as feeding structures and housing must be taken into account and this is only possible through full wave EM analysis Electromagnetic simulations can be highly accurate but they tend to be computationally expensive Therefore practical design optimization methods have to be computationally efficient so that the number of CPU intensive high fidelity EM simulations is reduced as much as possible during the design process For the same reasons techniques for creating fast yet accurate models of microwave structures become crucially important In this edited book the authors strive to review the state of the art simulation driven microwave design optimization and modeling A group of international experts specialized in various aspects of microwave computer aided design summarize and review a wide range of the latest developments and real world applications Topics include conventional and surrogate based design optimization techniques methods exploiting adjoint sensitivity simulation based tuning space mapping and several modeling methodologies such as artificial neural networks and kriging Applications and case studies include microwave filters antennas substrate integrated structures and various active components and circuits The book also contains a few introductory chapters highlighting the fundamentals of optimization and modeling gradient based and derivative free algorithms metaheuristics and surrogate based optimization techniques as well as finite difference and finite element methods a
