## Advances In Construction Materials 2007:

**Advances in Construction Materials 2007** Christian U. Grosse,2007-08-14 This book addresses one of the most important material categories Materials used for constructions A large percentage of the gross national product of most countries goes into infrastructure and buildings This statement is true not only for the present but for most other periods in history and for most cultures This explains why understanding the behavior of construction materials has always been the object of intense investigations The construction industry consumes extreme volumes of material and the growing demand for quality and safety require continuous improvement of materials and material compositions A deep understanding of material behavior is essential to enable efficient construction light weight or heavily burdened structures ask for the development of innovative composites or new material compositions Rapid economic growth and a dense and growing population require sensitive and sustainable use of resources Finally efficient use of resources means extending the usage of existing structures so non destructive testing methods are needed to assess the safety and utility of these structures Civil Engineers and Material Scientists from all over the world are openly discussing ideas for new materials and for structural health monitoring Over the last decade many innovations have come to fruition primarily in the field of composites but also for improving the design of existing material This is especially true for concrete perhaps the most used material in the world broadening its range of applications and improving performance

*Advances in Geopolymers* ,2025-04-10 Globalization generates a large amount of waste that significantly affects storage areas and the surrounding environment At the same time in the civil engineering section of producing cement the CO2 emissions made this problem very important Therefore the need for green materials with lower exploitation costs and natural resource consumption became primary Alternative binder systems such as alkali activated materials including geopolymers as a subclass have demonstrated significant potential in recent years as a more sustainable alternative to ordinary Portland cement concrete This book joins the activities and knowledge of

researchers from multiple fields to present a comprehensive overview of the advances in the synthesis and characterization of geopolymers including developed mix design the performance of natural fiber reinforcement and foaming materials and

cases of civil and environmental engineering application
