## **Bilirubin Secretory Pathway Its Disorders:**

**Bilirubin Secretory Pathway and Its Disorders** Eva Sticova,2015-12-16 Identification and functional characterization of numerous transport systems at the sinusoidal and canalicular membrane of hepatocytes have significantly expanded our understanding of bilirubin metabolism and contributed to elucidation of molecular basis of hereditary jaundice Moreover dysregulation of hepatobiliary transport systems could explain jaundice in many acquired liver disorders This work is focused on the new aspects of bilirubin handling in hepatocytes based on elucidation of the molecular basis of Rotor syndrome The first study is concerned with the antioxidative properties of bilirubin in liver tissue in a model of obstructive cholestasis In the second part we present several novel mutations in ABCC2 the gene associated with Dubin Johnson syndrome In the third key study focused on Rotor syndrome we demonstrated that biallelic inactivating mutations causing complete absence of transport proteins OATP1B1 and OATP1B3 result in Rotor type jaundice In the last study we confirmed that decreased expression of Rotor proteins may contribute to conjugated hyperbilirubinemia in advanced liver diseases with predominantly obstructive type of cholestasis

Shafritz,2012-12-06 The last few years have witnessed major developments in molecular biology which have had a significant impact on biomedical knowledge As a result new concepts in cell biology have emerged new etiologic agents have been discovered and new drugs have

become available Furthermore the world of mediators cytokines and humoral factors has enlarged considerably in a relatively short period and this has modified our views of diverse physio pathologic processes as well as opened up new therapeutic prospects In addition recent technologic advances have revolutionized our diagnostic methodology and have greatly enhanced the power of our therapeutic resources All these factors have contributed to a substantial remodeling of both liver science and clinical hepatology and these changes have generated the motivation for the production of the present book which attempts to give an account of well known clinical facts in the light of current thinking It is the fruit of the coordinated work of experts from different countries in three continents In a sense it is a manifestation of the fact that international cooperation is becoming increasingly important not only in the expansion of science but also in its exposition We hope that Hepatobiliary Diseases will be useful to both students and clinicians and that internists gastroenterologists and general practitioners will find in its contents a satisfactory coverage of their field of interest

**Physiology of Membrane Disorders** Thomas E. Andreoli, Darrell D. Fanestil, Joseph F. Hoffman, Stanley G. Schultz, 2013-11-11 The second edition of Physiology of Membrane Disorders represents an extensive revision and a considerable expansion of the first edition. Yet the purpose of the second edition is identical to that of its predecessor namely to provide a rational analysis of membrane transport processes in individual membranes cells tissues and organs which in turn serves as a frame of reference for rationalizing disorders in which derangements of membrane transport processes play a cardinal role in the clinical expression of disease. As in the first edition this book is divided into a number of individual but closely related sections. Part V represents a new section where the problem of transport across epithelia is treated in some detail. Finally Part VI which analyzes clinical derangements has been enlarged appreciably.

THE EDITORS xi Preface to the First Edition The purpose of this book is to provide the reader with a rational frame of reference for assessing the pathophysiology of those disorders in which derangements of membrane transport processes are a major factor responsible for the clinical manifestations of disease. In the present context we use the term membrane transport to refer to those molecular processes whose cardinal function broadly speaking is processes in a catholic sense the vectorial transfer of molecules either individually or as ensembles across biological interfaces the latter including those interfaces which separate different intracellular compartments the cellular and extracellular compartments and secreted fluids such as glomerular filtrate and extracellular fluids
