The Routledge International Handbook of Automated Essay Evaluation Mark D. Shermis, Joshua Wilson, 2024-06-27 The Routledge International Handbook of Automated Essay Evaluation AEE is a definitive guide at the intersection of automation artificial intelligence and education This volume encapsulates the ongoing advancement of AEE reflecting its application in both large scale and classroom based assessments to support teaching and learning endeavors It presents a comprehensive overview of AEE's current applications including its extension into reading speech mathematics and writing research modern automated feedback systems critical issues in automated evaluation such as psychometrics fairness bias transparency and validity and the technological innovations that fuel current and future developments in this field As AEE approaches a tipping point of global implementation this Handbook stands as an essential resource advocating for the conscientious adoption of AEE tools to enhance educational practices ethically The Handbook will benefit readers by equipping them with the knowledge to thoughtfully integrate AEE thereby enriching educational assessment teaching and learning worldwide Aimed at researchers educators AEE developers and policymakers the Handbook is poised not only to chart the current landscape but also to stimulate scholarly discourse define and inform best practices and propel and guide future innovations

Crossing the threshold Andreas C. Göransson, 2021-02-18 The theory of evolution is considered the unifying theory of biology An accurate understanding of evolution is vital both for the understanding of diverse topics in biology but also for societal issues such as antibiotic resistance or biodiversity In contrast decades of research in science education have revealed that students have difficulties to accurately understand evolutionary processes such as mutation and natural selection The majority of this research relies on a conceptual framework of so called key concepts variation selection inheritance derived from scholarly descriptions of natural selection Recent research suggests that non domain specific concepts such as randomness probability spatial and temporal scales so called threshold concepts are important for evolution

understanding in addition to the key concepts. Thus many important elements of evolutionary theory are counter intuitive or lie outside direct perception. Hence representations such as visualizations, models and simulations are considered to be important for teaching and learning evolution. While the importance of visualizations is generally acknowledged for science education, less is known about how visual design can facilitate students' understanding of threshold concepts such as random mutations or spatial scales. This thesis uses the Model of Educational Reconstruction MER as the guiding framework for exploring the significance of threshold concepts by analysing the conceptual content of students' explanations and extant visualizations of natural selection. MER combines scientific content with teaching and learning perspectives for the analysis and design of learning environments. Content analysis of visualizations available online showed that most fail to fully represent the basic principles of natural selection: variation, selection and inheritance. Moreover, the representational potential of visualizations was seldom used to represent threshold concepts such as randomness in origin of variation. Visualizations were also biased to animals as the context of evolution. Similarly, upper secondary and tertiary students' explanations of natural selection were seldom complete in terms of the basic principles and threshold concepts such as randomness were often lacking. Especially significant was the almost complete lack of randomness in upper secondary students' explanations. In addition, threshold concepts were context sensitive across the items used: bacteria, cheetah and salamander. For example, spatial scale and randomness was significantly more common in responses to the bacteria item compared to the cheetah and salamander items. Considering the results from these studies, three interactive visualizations were developed: evolution of antibiotic resistance and fur colouration in mice. The visualization design was conducted iteratively following a Design Based Research approach and evaluated in classroom settings in secondary and upper secondary Swedish schools. The results showed that visualizations targeting randomness and genetic level events such as mutations can guide students towards a more scientific conception of natural selection. However, there were differences across the visualizations and student samples. In addition, while students often inferred randomness from the visuals, the results showed that integration of randomness into explanations of natural selection may be challenging. Hence, future research should explore the role of guidance and reflection for students' understanding of randomness. The thesis also discusses the role of students' intuitive conceptions in relation to the use of interactive visualizations and how these preconceptions interact with the presented message. By using the theory of frame semantics, framing effects and conceptual integration, students' issues of achieving an accurate understanding of evolution are discussed in relation to the theory of conceptual change. Implications for teaching and learning natural selection as well as visualization design for learning are also discussed. Evolutionsteorin förs ofta fram som biologins främrande teori. Vikten av en korrekt och användbar evolutionsfråga har dock ofta betonats inte minst för elevers förståelse inom biologins olika delområden men också för att fatta beslut i samhället, som exempelvis antibiotikaresistens. Många av de centrala delarna av evolutionsteorin är kontraintuitiva eller abstrakta och decennier av forskning har visat att elever

Pathology of Peritoneal

Metastases Olivier Glehen, Aditi Bhatt, 2020-04-30 This book covers some well known and some unexplored pathological aspects of management of peritoneal metastases and should be read by both surgeons and pathologists involved in the management of peritoneal surface malignancies. The evaluation of cytoreductive surgery specimens is explored for the prognostic information it can provide and recommendations for evaluation of such specimens are provided. The pathways and patterns of peritoneal dissemination and their clinical implications on the extent of surgery performed and other aspects of management are discussed for some common peritoneal tumours. The exploratory studies presented here provide a new perspective on the surgical resection of peritoneal metastases. Other important aspects of pathological evaluation like pathological response to chemotherapy, diagnosis and classification of rare peritoneal tumors have also been covered in different chapters. Keeping in sync with the progress in molecular oncology, the role of molecular oncology in the current and future management of peritoneal metastases is addressed for different tumors.

Empowering Science and Mathematics

for Global Competitiveness Yuli Rahmawati, Peter Taylor, 2019-06-07 This conference proceedings focuses on enabling science and mathematics practitioners and citizens to respond to the pressing challenges of global competitiveness and sustainable development by transforming research and teaching of science and mathematics. The proceedings consist of 82 papers presented at the Science and Mathematics International Conference SMIC 2018 organised by the Faculty of Mathematics and Natural Sciences Universitas Negeri Jakarta Indonesia. The proceedings are organised in four parts: Science, Science Education, Mathematics and Mathematics Education. The papers contribute to our understanding of important contemporary issues in science especially nanotechnology, materials and environmental science, science education in particular environmental sustainability, STEM and STEAM education, 21st century skills, technology education and green chemistry and mathematics and its application in statistics, computer science and mathematics education.
