BIM Design Richard Garber, 2014-08-11 Building information modelling BIM is revolutionising building design and construction For architects BIM has the potential to optimise their creativity while reducing risk in the design and construction process thus giving them a more significant role in the building process This book demonstrates how innovative firms are using BIM technologies to move design away from the utilitarian problems of construction engaging them in a stunning new future in the built environment Whereas recent books about BIM have tended to favour case study analyses or instruction on the use of specific software BIM Design highlights how day to day design operations are shaped by the increasingly generative and collaborative aspects of these new tools BIM strategies are described as operations that can enhance design rather than simply make it more efficient Thus this book focuses on the specific creative uses of information modelling at the operational level including the creative development of parametric geometries and generative design the evaluation of environmental performance and the simulation and scheduling of construction fabrication operations This book also engages BIM's pragmatic efficiencies such as the conflict checking of building systems and the creation of bills of quantities for costing and in so doing it demonstrates how BIM can make such activities collaborative Throughout projects are used to illustrate the creative application of BIM at a variety of scales These buildings showcase work by firms executing projects all over the world SHoP Architects and Construction New York Morphosis Los Angeles Populous London GRO Architects New York Reiser Umemoto New York Gensler Shanghai and UNStudio Amsterdam

Constructing Change: The Impact of Digital Fabrication on Sustainability Ena Lloret-Fritsch, Selen Ercan Jenny, David Jenny, 2024-09-23 Every year nearly 100 billion tonnes of raw material globally is extracted from the earth approximately half of it for construction purposes The construction industry is responsible for an estimated third of global waste while reuse of construction materials is not increasing fast enough The same sector accounts for at least 40 per cent of global carbon dioxide emissions There is thus an urgent need to showcase how novel approaches in digital fabrication might be able to enhance the sustainability of buildings and transform construction Featuring specialists from architecture engineering and materials science this AD presents innovative research and new construction systems approaches and trends to demonstrate how existing methods and unique concepts that utilise cutting edge technologies can in a short space of time help us advance towards a culture of sustainable construction It focuses on digital design and manufacturing including XR technologies and highlights unique ways to build with earth or concrete Contributors Fabio Amicarelli Ana Anton and Benjamin Dillenburger Tobias Bonwetsch and Tobias Huber Mario Carpo Sasha Cisar Jelle Feringa Corentin Fivet Abel Gawel Fabio Gramazio and Matthias Kohler Norman Hack Silke Langenberg Sarah M Schlachetzki and Robin Rehm Daniela Mitterberger and Kathrin Drfler Romana
