Who Should Read This Book Those who have little or no programming experience or who might be picking up Visual Basic as a second language. Bug Alert Description: Changing the startup form's name in a VB WinForms app does not update the Startup form. 4517 Explanation: In the latest Visual Basic update on GitHub, Microsoft accidentally introduced a significant bug that you should be aware of. In the Visual Basic project properties dialog, on one of the tabs Application, is a drop down box for selecting the startup object. This can be either a Main method or a System.Windows.Forms instance or System.Windows.Window for WPF. When you do a rename on a form, say from the code editor in source or from the solution explorer currently set as the startup form, the rename doesn't cascade to the startup object project property, causing the project to enter an invalid state where the user must now manually reset this project property from the now nonexistent Form to the new name. This is a huge annoyance. The fix for the bug until Microsoft addresses can be found here: <http://www.jamesfo>
