comprise 55 selected papers from the International Conference on Advanced Wastewater Treatment Recycling and Reuse. The range of technologies includes advanced physico chemical treatment, advanced biological treatment including biological nutrient removal, disinfection problems, membrane treatment, agricultural applications and natural treatment systems and applications in the textile and tannery industries. More importantly, the strategic approach to sustainable water resources planning and development is emphasised throughout, with wastewater reclamation, recycling and reuse being considered as a key element of water resources management.

Nemerow, Franklin J. Agardy, 1998-03-09

Strategies of Industrial and Hazardous Waste Management by Nelson L. Nemerow and Frank J. Agardy. For years, plant engineers, engineering professors, municipal engineers, EPA personnel and other professionals have relied on the expertise of these authors in the area of industrial and hazardous waste management. This book is full of new ideas, methods, models, data, updated information and new case histories. This latest classic reference from Nelson Nemerow and Frank Agardy is by far the most comprehensive and useful source available on the generation, treatment and disposal of all significant industrial and hazardous wastes. Strategies of Industrial and Hazardous Waste Management addresses the needs of its wide-ranging audience by dividing its coverage into four parts. Part I presents the basic information the industrial waste engineer needs to know about the environmental impact of various wastes, writing environmental impact statements, protecting streams from further pollution, calculating final treatments, testing treatment efficiency and the influence of economic factors on waste treatment decisions. Part II explores theories and designs of waste treatment and shows how waste can be reduced through proper operation of manufacturing plants. It ranges beyond the removal of suspended and colloidal solids to include coverage of neutralization, equalization and proportioning, removal of inorganic dissolved salts and private contract collection and treatment. Also included is a novel paradigm for obtaining zero pollution in the future through environmentally balanced industrial complexes. Part III demonstrates waste management in action using case studies from around the world to show theories and models successfully adapted and put into practice. All cases are based on the authors' actual experiences; the cases in Chapters 17, 19, 22, 23 and 24 have never been previously published. Part IV offers concise evaluations of all major liquid industrial wastes, including their origins, characteristics and acceptable treatments. Industries are classified into six categories: apparel, food processing, materials, chemicals, energy and, in significantly extended coverage, non-point practices. Included are separate considerations of radioactive and hazardous as opposed to conventional waste. No waste management professional should be without this essential volume. Focused on need-to-know information, common pitfalls and practical

solutions to all kinds of problems Strategies of Industrial and Hazardous Waste Management is an answer source unlike any other
