- Monomers: stable molecule but readily bonds with other monomers
- Polymers: monomers in a chain formation of that group
- Dehydration synthesis: the reaction to build polymers from monomers (polymerization) (water molecule is released: H and OH that bonds)
 - Anabolic: build complex molecules from simpler ones => Endergonic (construction) => Consumption of Energy => $+\Delta G$ => Nonspontaneous
- Hydrolysis: the reaction to break down polymers into monomers (water molecule is a reactant)
 - Catabolic: break down complex molecules to simpler ones => Exergonic (releasing energy from the energy stored in the bonds) => Release of Energy => $-\Delta G$ => Spontaneous
- Directionality influences the Structure and Function of the Polymer
 - Amino Acids: N-terminus and C-terminus determine from which side can more amino acids be added and thus the structure and function of the protein is influenced
 - Nucleic Acids: linear sequence of nucleotides that have ends, defined by the 3' hydroxyl and 5' phosphates of the sugar in the nucleotide. During DNA and RNA synthesis, nucleotides are added to the 3' end of the growing strand, resulting in the formation of a covalent bond between nucleotides.
- Uniqueness of Carbon:
 - Atom is small in size with the valence electrons close to the nucleus, so it creates stable bonds
 - 4 valence electrons allows it to bond up to 4 different elements
 - Multiple types of Carbon Bonds: C-C, C=C, C≡C, C≡C

Macromolecular Class	Elements in composition	Monomer (or subcomponents)	Polymer	Shape / structure	Biological function/s	Key example/s	Structure-function relationship example/s	Other notes or properties

David L. Nelson, Michael M. Cox, 2017-01-01 Absolute Ultimate Guide to Principles of Biochemistry Study Guide and Solutions Manual

Biochemistry Basics Milin Kurup, 2020-12-21 The Biochemistry Basics Biochemistry and Molecular Biology Study Guide was created by a renowned student from the University of Florida and includes all notes, diagrams, and study guides for all the important subjects covered in Biochemistry, Molecular Biology, Genetics, and Microbiology. Milin Kurup is a double major in B.S. Microbiology and Cognitive and Behavioral Neuroscience student from the University of Florida. In addition to his degree, Milin is a UF Biochemistry BCH4024 Study Instructor, Group Leader, a Microbiology MCB3020L Teaching Assistant, a Genetics PCB4522 Teaching Assistant, and a Neuroscience Research Assistant at the University of Florida. While many of these classes cover high density material, this study guide hopes to organize and condense the whole curriculum into short page review sheets. In the author's time of instruction and study, he organized a collection of all reactions, mechanisms, processes, and concepts all studied in Biochemistry, Genetics, and Microbiology. Overall, this biochemistry study guide covers topics such as biomolecule structures, Protein, Carbohydrate, Nucleic Acids, and Lipids, biomolecules function, biomolecule metabolism, Protein Metabolism, Carbohydrate Metabolism, Nucleic Acid Metabolism, and Lipid Metabolism, physiological biochemical relationships, genetics, and biological microbiological biochemical processes.

Overall, the guide is organized into 13 page summaries of each specific topic and acts as a study guide for those who hope to study individual concepts in detail. All sections include detailed diagrams, color coded notes, labeled illustration, and detailed descriptions for effective comprehension. In addition to class studies, many students also have used this study guide as an MCAT review guide. The short and condensed review pages have helped many students organize and categorize important topics as they continue to study for the MCAT. Ultimately, this organized set can be extremely useful for students' review, especially before class exams, school projects, standardized test, and much more.

Conversational Science MCAT(R) Volume 1 Jim Brinegar, 2015-07-05 The Conversational Science series is a new or at least different approach to preparing for the latest version of the Medical College Admissions Test This bit is only my

personal opinion but I think the easiest way to do well on the MCAT is to understand the material There s one heck of a lot of material though so how should you study the things you ve already covered in class This study guide is written in an informal tone of voice because you and I are having a conversation and not a lecture This study guide contains a limited number of crudely drawn figures You re the person studying for the exam so I ask you to draw the rest of the figures for yourself A figure that you draw yourself even if you have no artistic talent whatsoever teaches you much more than you can learn by simply looking at the beautiful full color professionally drawn figures in your textbooks This study guide has a limited number of review questions so you can check if you really did understand one chapter before you move on to the next This study guide DOES NOT contain any practice exams This is because in my opinion again based on my experience as a student and as an instructor the questions in the practice exams of many study guides are too often confusing poorly written and not at all like the actual questions on the actual exam And sometimes the answers given for some questions on some practice exams are just plain wrong This study guide may not be for everyone but I think there s a good chance it ll help you convince yourself that you really do understand the material Medical College Admissions Test MCAT and MCAT2015 are registered trademarks of the Association of American Medical Colleges which neither sponsors nor endorses this product I took the MCAT way back in the middle of the 1980s and I did very well if I do say so myself **Principles of Biochemistry (Loose Leaf) & Study Guide & Solutions Manual** David L.
