Bubbly Flows Analysis Modelling And Calculation Heat And Mass Transfer:

Bubbly Flows Martin Sommerfeld, 2003-10-08 The book summarises the outcome of a priority research programme Analysis Modelling and Computation of Multiphase Flows The results of 24 individual research projects are presented The main objective of the research programme was to provide a better understanding of the physical basis for multiphase gas liquid flows as they are found in numerous chemical and biochemical reactors The research comprises steady and unsteady multiphase flows in three frequently found reactor configurations namely bubble columns without internal airlift loop reactors and aerated stirred vessels For this purpose new and improved measurement techniques were developed From the resulting knowledge and data new and refined models for describing the underlying physical processes were developed which were used for the establishment and improvement of analytic as well as numerical methods for predicting multiphase reactors Thereby the development layout and scale up of such processes should be possible on a more reliable basis

Reactive Bubbly Flows Michael Schlüter, Dieter Bothe, Sonja Herres-Pawlis, Ulrich Niekens, 2021-07-29 This book presents experimental and numerical methods that have been developed during six years of targeted research within the DFG priority program SPP 1740 elucidating the interaction between hydrodynamics mass transfer and transport as well as chemical reactions in bubbly flows A special feature of this book is its focus on an interdisciplinary research approach with contributions from chemistry mathematics and engineering sciences providing enhanced or novel experimental methods models and numerical simulations This book provides fundamental knowledge to students about the current state of knowledge regarding transport processes in reactive bubbly flows as well as to scientists emphasizing pressing research questions and further current demands for fundamental research Engineers from the chemical industries will get valuable insights into relevant gas liquid processes and benefit from recommendations concerning the design of gas liquid reactors and laboratory experiments for studying the performance of gas liquid reactions in their own lab *Multiphase Flow*

Analysis Using Population Balance Modeling Guan Heng Yeoh, Dr. Chi Pok Cheung, Jiyuan Tu, 2013-08-19 Written by leading multiphase flow and CFD experts this book enables engineers and researchers to understand the use of PBM and CFD frameworks Population balance approaches can now be used in conjunction with CFD effectively driving more efficient and effective multiphase flow processes Engineers familiar with standard CFD software including ANSYS CFX and ANSYS Fluent will be able to use the tools and approaches presented in this book in the effective research modeling and control of multiphase flow problems Builds a complete understanding of the theory behind the application of population balance models and an appreciation of the scale up of computational fluid dynamics CFD and population balance modeling PBM to a variety of engineering and industry applications in chemical pharmaceutical energy and petrochemical sectors The tools in this book provide the opportunity to incorporate more accurate models in the design of chemical and particulate based multiphase processes Enables readers to translate theory to practical use with CFD software *Applied Mechanics Reviews*, 1993

Chemical Reactor Modeling Hugo A. Jakobsen, 2008-10-15 Chemical Reactor Modeling closes the gap between Chemical Reaction Engineering and Fluid Mechanics It presents the fundamentals of the single fluid and multi fluid models for the analysis of single and multiphase reactive flows in chemical reactors with a chemical reactor engineering rather than mathematical bias The book discusses numerical methods for solving the resulting equations as well as the interplay between physical and numerical modes It is organized in 12 chapters combining theoretical aspects and practical applications and covers some of the recent research in several areas of chemical reactor engineering This book contains a survey of the modern literature in the field of chemical reactor modeling The book is written by a Chemical Engineer for Chemical Process Engineers using the standard terminology of this community It is intended for researchers and engineers who want to develop their own codes or who are interested in a deeper insight into commercial CFD codes in order to derive consistent extensions and to overcome black box practice It can also serve as a textbook and reference book for both students and practitioners

32nd European Symposium on Computer Aided Process Engineering Ludovic Montastruc, Stephane Negny, 2022-06-30 32nd European Symposium on Computer Aided Process Engineering ESCAPE 32 contains the papers presented at the 32nd European Symposium of Computer Aided Process Engineering ESCAPE event held in Toulouse France It is a valuable resource for chemical engineers chemical process engineers researchers in industry and academia students and consultants for chemical industries who work in process development and design Presents findings and discussions from the 32nd European Symposium of Computer Aided Process Engineering ESCAPE event
