

AMDM Fall Final Exam Review

- Given that an average of 18 people can fit inside a square measuring 5 feet by 5 feet, estimate the size of a crowd that is 10 feet deep on both sides of the street standing along a 1-mile section of a parade route. (1 mile = 5,280 ft)
- The size of a television is the length of the diagonal of its screen in inches. The aspect ratio of the screens of older televisions is 4:3, while the aspect ratio of newer wide-screen televisions is 16:9. Find the width and height of an older 25-inch television whose screen has an aspect ratio of 4:3.

Consider two grading systems for determining your final class average. Each system is a weighted average of measures that include test grades, final exam grade, homework, and class participation.

Grading System I	Grading System II
Test average – 40%	Test average – 60
Final Exam Grade – 25%	Final Exam Grade – 15%
Homework – 25%	Homework – 15%
Class Participation – 10%	Class Participation – 10%

- If your values are the following, which grading system do you prefer and why?
 - Test average = 84
 - Final exam grade = 68
 - Homework = 90
 - Class participation = 95
- If you score 10 points higher on the final exam, how does your final grade average change under each system?

The Midtown Meteors keep track of the distance each member runs per week. The distances, in kilometers, are listed below:

48	62	54	38	46	40	53	63
34	45	36	63	51	60	52	44
33	47	55	42	39	57	49	56

- What is the standard deviation for the data?
- What information does the standard deviation give you?

Ms. Snow conducted a survey of her homeroom. She asked students what math course and what science course they were taking this semester. Next page are the results.
