Optical Performance Monitoring Calvin C. K. Chan, 2010-02-11 This in depth detailed reference presents for the first time a comprehensive treatment of recent advances in optical performance monitoring Written by leading experts in the field the book provides an overview of recent developments in the area and the role of OPM in future optical systems and networks Detailed discussions of various advanced techniques are provided to illustrate their principles **FEATURES** Presents the principles and applications of advanced OPM techniques together with a comparative evaluation of their effectiveness in monitoring individual parameters such as optical signal to noise ratio chromatic dispersion and polarization mode dispersion Explains the principles of the various advanced optical signal processing techniques and their applications in OPM Examines the role and applications of OPM in optical networks including optical transport networks coherent optical systems and long haul optical transmission systems Discusses the current approaches of OPM in the global standard SDH SONET This book is ideal for technical professionals and researchers who want to understand and evaluate advanced techniques in OPM and their impact on the practical design of next generation optical systems and networks Provides a thorough and detailed discussion of the latest optical performance monitoring OPM techniques and their applications presenting a comparative analysis of each method Contains high quality technical contributions from leading experts covering both principles and practical aspects of advanced OPM techniques Addresses challenges and opportunities related to OPM in next generation reconfigurable optical systems and networks *Advanced Performance Monitoring in All-Optical Networks* Yannis Benlachtar, 2010-09 This thesis investigates advanced optical performance monitoring approaches for future all optical networks using the synchronous sampling technique This allows for improved signal quality estimation fault management and resource allocation through improved control of transmission at the physical layer level Because of the increased transparency in next generation networks it is not possible to verify the quality of the signal at each node because of the limited number of optical electrical optical conversions and therefore new non intrusive mechanisms to achieve signal quality monitoring are needed The novel synchronous sampling technique can be deployed to estimate the bit error rate considered an important quality measure and hence can be utilised to certify service level agreements between operators and customers This method also has fault identification capabilities by analysing the shapes of the obtained histograms Each impairment affects the histogram in a specific way giving it a unique shape that can be used for root cause analysis *Long-haul and Access Networks, Optical Metro, and WDM* A. Lord, D. W. Faulkner, D. W. Smith, 2001 This volume contains the proceedings of the NOC 2001 at Adastral park UK June 26 29 2001 With about 70 papers this book highlights the gigabit ethernet PON developments and other work on standard broadband PONs such as dynamic bandwidth assignment There are 10 papers on optical packet switching and work on optical cross connects and DWDM for long haul systems is presented **Index to**
