Annual Report to Congress, Fiscal Year 1996, 1998 *The Road Ahead: Advanced Vehicle Technology and Its Implications* Committee on Commerce, Science, and Transportation United States Senate, 2013-12-31 Ever since the Model T first rolled off the assembly line the car and its drivers have shaped our history our lives and our imagination. The automobile has also been central to the story of America's innovation and public safety standards. Seat belts brake lights and air bags have saved innumerable lives. Today the cars on our roads are safer than ever but we still have a long way to go. Most crashes frankly are caused by driver error. Automakers regulators and researchers must continue their pursuit of safer vehicles and fewer fatalities especially at the hands of driver distraction impairment or poor judgement. In recent years I have seen advances in vehicle technology that show great potential not only to save the lives but also to revolutionize how we understand the relationship between driver and car. There is much to be excited about as these technologies develop but there are risks. As our cars become more computerized and electronics based can the industry make sure that they are reliable and prevent failures. And as our cars become more connected to the Internet to wireless networks with each other and with our infrastructure are they at risk for catastrophic cyberattacks. **The Road Ahead** United States.
