Seto,2012-12-09 Autonomy for Marine Robots provides a timely and insightful overview of intelligent autonomy in marine robots A brief history of this emerging

field is provided along with a discussion of the challenges unique to the underwater environment and their impact on the level of intelligent autonomy required Topics covered at length examine advanced frameworks path planning fault tolerance machine learning and cooperation as relevant to marine robots that need intelligent autonomy **Autonomous**

Underwater Vehicles Nuno Cruz,2011-10-21 Autonomous Underwater Vehicles AUVs are remarkable machines that revolutionized the process of gathering ocean data Their major breakthroughs resulted from successful developments of complementary technologies to overcome the challenges associated with autonomous operation in harsh environments Most of these advances aimed at reaching new application scenarios and decreasing the cost of ocean data collection by reducing ship time and automating the process of data gathering with accurate geo location With the present capabilities some novel paradigms are already being employed to further exploit the on board intelligence by making decisions on line based on real time interpretation of sensor data This book collects a set of self contained chapters covering different aspects of AUV technology and applications in more detail than is commonly found in journal and conference papers They are divided into three main sections addressing innovative vehicle design navigation and control techniques and mission preparation and analysis The progress conveyed in these chapters is inspiring providing glimpses into what might be the future for vehicle technology and applications The British National Bibliography Arthur James Wells,2006 *Remotely Operated Vehicles*
