BIM in Small Practices Robert Klaschka, 2019-08-14 BIM Building Information Modelling is revolutionising architecture and construction as more and more practices are realising the benefits it brings to design sustainability and construction. There is a perception that BIM is a process best left to large practices requiring significant resources and the ability to invest heavily in IT. This book overturns that misconception introducing a selection of inspirational BIM enabled projects by small architectural practices. Full of practical tips and hard won experience **BIM in Small Practices Illustrated Case Studies** includes pithy contributions from industry experts who identify and explore the important issues for small practices including how to get your practice started with BIM and how it aligns to the new Plan of Work. This landmark publication will motivate small practices who are considering taking those first steps towards implementing BIM.

Digital Technologies for Engineering Construction Information Productivity Fonbeyin Henry Abanda, 2025-11-28 **Digital Technologies for Engineering Construction Information Productivity** goes beyond other digital construction books by examining how emerging digital construction technologies and other popular technologies developed by for example Microsoft can be used in improving the productivity of construction information. The book discusses both the theory and practice through use case illustrations in integrated software environments and successfully blends applications and workflows of construction technologies with more common and non industry specific software systems. It seeks to unleash the power of readily available digital technologies in optimizing the productivity of construction project information management. This book is essential for students, academics, educators, construction professionals and construction software developers. For students the book provides a solid foundation in understanding digital construction technologies including building information modelling, BIM and some selected Microsoft Products and their applications in managing construction project information. For academics and educators it will provide insights into research niches around integration of the different digital technologies and serve as a useful text for teaching at undergraduate and postgraduate levels in Architecture, Engineering and Construction (AEC) subjects. Professionals will find this useful for the adoption of digital technologies in their

own practice while software developers will find this beneficial in the development of interoperability software for efficient information exchange between the various software systems
