*Impact of Free App Promotion on Future Sales* Harshal Chaudhari, 2017 Amazon's Free App of the Day program aimed at improving app visibility using daily free promotions is a compelling experiment in the economics of free In this study we investigate the longer term consequences of free app promotions on the performance of apps on Amazon Appstore In particular we quantify the causal impact of such promotions on apps' future download volumes star ratings and sales rank using a multi-level model On average apps see a surge in download volumes during such promotions albeit accompanied by a

short term negative effect on its star ratings On average sales rank briefly improves but falls to pre promotion levels within a few months Interestingly our findings suggest that lower ranked apps are the biggest beneficiaries of these promotions as they witness the most significant sales impact In addition we show the presence of a cross market spillover effect of such promotions on the performance of the same apps on Google Playstore Our results underscore a nuanced set of trade offs for an app developer do the benefits of running a promotion and boosting ones sales rank warrant the lost revenue and risk of lower user ratings in the long run
