Advanced Separation Techniques for Polyolefins Harald Pasch, Muhammad Imran Malik, 2014-08-27 This Springer Laboratory volume introduces the reader to advanced techniques for the separation and fractionation of polyolefins It includes detailed information on experimental protocols and procedures addressing the experimental background of different polyolefin fractionation techniques in great detail The book summarizes important applications in all major fractionation methods with emphasis on multidimensional analytical approaches It comprises the most powerful modern techniques such as high temperature size exclusion chromatography HT SEC for molar mass analysis temperature rising elution fractionation TREF and crystallization analysis fractionation CRYSTAF for the analysis of chemical composition and branching high temperature two dimensional liquid chromatography HT 2D LC solvent and temperature gradient interaction chromatography SGIC and TGIC and crystallization elution fractionation CEF Beginners as well as experienced chromatographers will benefit from this concise introduction to a great variety in instrumentation separation procedures and applications With detailed descriptions of experimental approaches for the analysis of complex polyolefins the readers are offered a toolbox to solve simple as well as sophisticated separation tasks The book starts with an introduction into the molecular complexity of polyolefins the most widely used synthetic polymers with rapidly growing production capacities It systematically discusses crystallization based fractionation techniques including TREF CRYSTAF and CEF and column chromatographic techniques for molar mass chemical composition and microstructure as well as the combination of different fractionations in multidimensional experimental setups This book also includes basic information on the application of high temperature field flow fractionation

*Encyclopedia of Renewable and Sustainable Materials* ,2020-01-09 Encyclopedia of Renewable and Sustainable Materials Five Volume Set provides a comprehensive overview covering research and development on all aspects of renewable recyclable and sustainable materials The use of renewable and sustainable materials in building construction the automotive sector energy textiles and others can create markets for agricultural products and additional revenue streams for farmers as well as significantly reduce carbon dioxide CO<sub>2</sub> emissions manufacturing energy requirements manufacturing costs and waste This book provides researchers students and professionals in materials science and engineering with tactics and information as they face increasingly complex challenges around the development selection and use of construction and manufacturing materials Covers a broad range of topics not available elsewhere in one resource Arranged thematically for ease of navigation Discusses key features on processing use application and the environmental benefits of renewable and sustainable materials Contains a special focus on sustainability that will lead to the reduction of carbon emissions and enhance protection of the natural environment with regard to sustainable materials
