FPGAs Juan Jose Rodriguez Andina, Eduardo de la Torre Arnanz, Maria Dolores Valdes, 2017-07-28 Field Programmable Gate Arrays FPGAs are currently recognized as the most suitable platform for the implementation of complex digital systems targeting an increasing number of industrial electronics applications They cover a huge variety of application areas such as aerospace food industry art industrial automation automotive biomedicine process control military logistics power electronics chemistry sensor networks robotics ultrasound security and artificial vision This book first presents the basic architectures of the devices to familiarize the reader with the fundamentals of FPGAs before identifying and discussing new resources that extend the ability of the devices to solve problems in new application domains Design methodologies are discussed and application examples are included for some of these domains e g mechatronics robotics and power systems *Data Engineering and Communication Technology* K. Ashoka Reddy, B. Rama Devi, Bobby George, K. Srujan Raju, 2021-05-23 This book includes selected papers presented at the 4th International Conference on Data Engineering and Communication Technology ICDECT 2020 held at Kakatiya Institute of Technology Science Warangal India during 25 26 September 2020 It features advanced multidisciplinary research towards the design of smart computing information systems and electronic systems It also focuses on various innovation paradigms in system knowledge intelligence and sustainability which can be applied to provide viable solutions to diverse problems related to society the environment and industry **An Open-Source Research Platform for Heterogeneous Systems on Chip** Andreas Dominic Kurth, 2022-10-05 Heterogeneous systems on chip HeSoCs combine general purpose feature rich multi core host processors with domain specific programmable many core accelerators PMCAs to unite versatility with energy efficiency and peak performance By virtue of their heterogeneity HeSoCs hold the promise of increasing performance and energy efficiency compared to homogeneous multiprocessors because applications can be executed on hardware that is designed for them However this heterogeneity also increases system complexity substantially This thesis presents the first research platform for HeSoCs where all components from accelerator cores to application programming interface are available under permissive open source licenses We begin by identifying the hardware and software components that are required in HeSoCs and by designing a representative hardware and software architecture We then design implement and evaluate four critical HeSoC components that have not been discussed in research at the level required for an open source implementation First we present a modular topology agnostic high performance on chip communication platform which adheres to a state of the art industry standard protocol We show that the platform can be used to build high bandwidth e g 2 5 GHz and 1024 bit data width end to end communication fabrics with high degrees of concurrency e g up to 256 independent concurrent transactions Second we present a modular and efficient solution for implementing atomic memory operations in highly scalable many core processors which demonstrates near optimal linear throughput scaling for various synthetic and real world workloads and requires only 0 5 kGE per core Third we

present a hardware software solution for shared virtual memory that avoids the majority of translation lookaside buffer misses with prefetching supports parallel burst transfers without additional buffers and can be scaled with the workload and number of parallel processors Our work improves accelerator performance for memory intensive kernels by up to 4 Fourth we present a software toolchain for mixed data model heterogeneous compilation and OpenMP offloading Our work enables transparent memory sharing between a 64 bit host processor and a 32 bit accelerator at overheads below 0.7 % compared to 32 bit only execution Finally we combine our contributions to a research platform for state of the art HeSoCs and demonstrate its performance and flexibility

Architecture of Computing Systems - ARCS 2009 Mladen Berekovic, Christian Müller-Schloer, Christian Hochberger, Stephan Wong, 2009-02-19 This book constitutes the refereed proceedings of the 22nd International Conference on Architecture of Computing Systems ARCS 2009 held in Delft The Netherlands in March 2009 The 21 revised full papers presented together with 3 keynote papers were carefully reviewed and selected from 57 submissions This year's special focus is set on energy awareness The papers are organized in topical sections on compilation technologies reconfigurable hardware and applications massive parallel architectures organic computing memory architectures energy awareness Java processing and chip level multiprocessing

**Computer Organization, Design, and Architecture, Fifth Edition** Sajjan G. Shiva, 2013-12-20 Suitable for a one or two semester undergraduate or beginning graduate course in computer science and computer engineering Computer Organization Design and Architecture Fifth Edition presents the operating principles capabilities and limitations of digital computers to enable development of complex yet efficient systems With 50 percent updated material 11 new sections and four revised sections this edition takes students through a solid up to date exploration of single and multiple processor systems embedded architectures and performance evaluation

**On-Chip Communication Architectures** Sudeep Pasricha, Nikil Dutt, 2010-07-28 Over the past decade system on chip SoC designs have evolved to address the ever increasing complexity of applications fueled by the era of digital convergence Improvements in process technology have effectively shrunk board level components so they can be integrated on a single chip New on chip communication architectures have been designed to support all inter component communication in a SoC design These communication architecture fabrics have a critical impact on the power consumption performance cost and design cycle time of modern SoC designs As application complexity strains the communication backbone of SoC designs academic and industrial R D efforts and dollars are increasingly focused on communication architecture design On Chip Communication Architectures is a comprehensive reference on concepts research and trends in on chip communication architecture design It will provide readers with a comprehensive survey not available elsewhere of all current standards for on chip communication architectures A definitive guide to on chip communication architectures explaining key concepts surveying research efforts and predicting future trends Detailed analysis of all popular standards for on chip communication architectures Comprehensive survey of all research on communication architectures covering a wide

range of topics relevant to this area spanning the past several years and up to date with the most current research efforts  
Future trends that will have a significant impact on research and design of communication architectures over the next
