### Stakeholders

- Effectively engage with stakeholders (individuals or groups that have an interest or concern in the project and its outcome). Can include customers, end users, management, project team, sponsors, and any other individuals or organizations affected by the project or able to influence its outcome.
- Stakeholders can affect the project both positively and negatively.
- Engaging stakeholders supports value delivery.

### Value

- Focus on value, the ultimate measure of project success.
- May be something different for each stakeholder:
  - For the performing organization, value may be financial gain.
  - For others, it may be social good or benefit to customers.
- A business case should include the business drivers, allowing the team to find opportunities to increase potential project value.

### Systems Thinking

- Recognize, evaluate, and respond to system interactions.
- Holistic approach that looks at how items in a system:
  - Work together
  - Work over time
  - Interact with other systems.
- The project team and their ways of working are part of the project system.

### Leadership

- Demonstrate leadership behaviors, which include the ability to influence others and thus influence project results.
- Multiple project stakeholders, including the project manager and individual team members, should demonstrate leadership behaviors throughout the project.
- Leadership, along with personal character, can lead to project success and a positive work environment.

### Tailoring

- Tailor on the basis of context.
- Every project is unique.
- Tailor project elements to provide just enough structure to deliver value.
- Examples of areas to tailor include:
  - Activities
  - Development approach
  - Governance
  - Methods
  - Processes
- Team members should participate in tailoring decisions to fully own ownership of project results.
- Reducing waste in processes, resources, and artifacts is critical to tailoring.

### Quality

- Build quality into processes and products (deliverables).
- Includes the work to maintain quality.
- Product delivered should:
  - Meet acceptance criteria
  - Demonstrate fitness for use (meeting or exceeding customer expectations)
- Processes used should ensure product is delivered in the quickest, most cost-effective way possible.

### Complexity

- Navigate complexity.
- Complexity on projects has multiple sources, including:
  - Human: behaviors, differences in experience and attitudes
  - System: behaviors, dynamic interdependencies
  - Technical: innovations
  - Uncertainty and ambiguity
- To navigate complexity, the project team must continuously evaluate individual project elements and the changing interaction between them.

### Risk

- Optimize risk responses.
- A risk is an uncertain event that may affect the project objectives. May be:
  - Positive: opportunities
  - Negative: threats
- Focus not only on individual risks, but also on overall project risk (effect of uncertainty on project as a whole).
- Stakeholders' different risk appetites and thresholds must be considered.
- Project team should:
  - Increase probability and impact of opportunities
  - Decrease probability and impact of threats.

### Adaptability & Resiliency

- Embrace adaptability and resiliency.
- Projects never proceed exactly as plan.
- Events outside the control of the project manager and organization impact the project.
- Project and project team need to be able to:
  - Adapt: respond to changing conditions
  - Be resilient: absorb impacts and recover quickly.

### Change

- Enable change to achieve the envisioned future state.
- Change takes individuals and organizations from current state to a desired future state.
- Stakeholders may have different appetites for change:
  - Resistance may occur
- Change initiatives work better when stakeholders are fully engaged and motivated to deliver on the change.
