

### Active Transport

Sometimes molecules need to move into a crowded area. Since this is difficult, **ATP energy** is required to push the molecules into a more crowded area. See image below of **active transport**. Notice ATP is shown in the picture to signal that you are looking at active transport and not diffusion. Also, notice there are only 2 molecules on the left, and 12 on the right. Since the arrow is showing movement from left to right, this must be active transport for molecules to move from low concentration to high. ATP energy is required for this to occur. Remember, ATP energy is made by **mitochondria**.

-in the image below, molecule 1 and 2 will both enter the cell because they're more crowded outside (higher concentration). so some molecules must enter to balance out. Glucose will leave the cell because there is more glucose inside then outside.
