Algorithmics Of Matching Under Preferences Series On Theoretical Computer Science:

Algorithmics of Matching Under Preferences David F. Manlove, 2013 Matching problems with preferences are all around us. They arise when agents seek to be allocated to one another on the basis of ranked preferences over potential outcomes. Efficient algorithms are needed for producing matchings that optimise the satisfaction of the agents according to their preference lists. In recent years there has been a sharp increase in the study of algorithmic aspects of matching problems with preferences, partly reflecting the growing number of applications of these problems worldwide. This book describes the most important results in this area, providing a timely update to *The Stable Marriage Problem: Structure and Algorithms* by D. Gusfield and R. W. Irving (MIT Press, 1989) in connection with stable matching problems, whilst also broadening the scope to include matching problems with preferences under a range of alternative optimality criteria. **WALCOM:**
