George O. G. Löf

Active Solar Systems Solar Heat Technologies:

Active Solar Systems George O. G. Löf, 1993 Active Solar Systems is volume 6 in a series that surveys advances in solar energy research since the oil shock of the early 1970s Books in the series document in particular the period 1973 to 1985 which spawned a rich array of federally financed technological programs and developments facilitating the practical use of solar energy The twenty two contributions in Active Solar Systems introduce design analysis and control methods for active systems and cover advances in the interconnected technologies for water heating space heating and space cooling They show that with effective marketing and with environmental costs factored into individual consumer decisions there is strong potential for solar water heating and space heating and that solar cooling has potential but needs further development to become commercially viable The details of the materials involved in these technologies are covered in volume 5 Solar Collectors Energy Storage and Materials

Solar heat technologies, 1988

History and Overview of Solar Heat Technologies Donald A. Beattie, 1997 This final volume in a series that has surveyed advances in solar energy research since the oil shock of the early 1970s provides a broad overview of the U S solar thermal program It summarizes the conclusions of each of the nine technical volumes in the series and offers lessons drawn from the program for future governmental efforts to foster specific technologies Reading this history it becomes clear that what was unique about the federal solar program was its attempt to create research guidelines that included commercialization as part of the expected outcome The three contributors all active participants in the solar project are quite candid about what worked and what did not and why The result is a tale of bureaucracy and politics worth pondering as we debate the proper relationship between government and science

Implementation of Solar Thermal Technology Ronald W. Larson, Ronald Emmett West, 1996 Implementation of Solar Thermal Technology describes the successes and failures of the commercialization efforts of the U S solar thermal energy program from the oil embargo of 1973 through the demise of the program in the early Reagan administration and its afterlife since then The emphasis throughout is on lessons learned from the solar experience with an eye toward applications to other projects as well as toward possible renewal of efforts at commercialization Part I discusses the history of government involvement in solar development and the parallel development of the market for solar products Part II looks at the histories of specific commercialization programs for five areas active heating and cooling passive technologies passive commercial building activities industrial process heat and high temperature technologies Parts III VIII focus in turn on demonstration and construction projects quality assurance information dissemination programs efforts to transfer technology to industry incentive programs tax credits financing and grants and organizational support

Garg,1987-01-31 The main objective of writing the three volume *Advances in Solar Energy Technology* is to consolidate all the relevant latest information available in the field of solar energy applied and theoretical in nature and to assist both the students i.e. undergraduate postgraduate research scholars etc and the professionals i.e. consulting design and contracting firms I have discussed each and every topic in depth rather than a cursory overview All the material required on a particular topic is included in the chapter and I have wherever possible given useful relationships in equation graphical and tabular form It is hoped that this completed *Solar Energy Technology* will serve the best source material in this field The first chapter deals with the evacuated tubular collectors suitable to operate at a temperature of about 150 C with a daily energy collector efficiency in excess of 40 per cent These collectors thus would be useful for efficient operation of Solar Airconditioning System Power Generation and Process

Heat System Various advanced features like vacuum insulation selective black coating anti reflective coating heat pipe cusp reflector etc used in designing this advanced type of collector are discussed separately in this chapter Transient mathematical model for its performance prediction and different designs of evacuated tubular collectors commercially produced in different countries of the world are described in brief to give the reader a good picture about their scope and working

Energy Technology Status Report, 1992 *Advances in Solar Energy Technology* H.P. Garg, 2012-12-06 The purpose of writing this three volume *Advances in Solar Energy Technology* is to provide all the relevant latest information available in the field of Solar Energy Applied as well as Theoretical to serve as the best source material at one place Attempts are made to discuss topics in depth to assist both the students i.e. undergraduate postgraduate research scholars etc and the professionals i.e. Consultancy design and contracting firms Chapter 1 starts with a brief history of solar houses active heating one of the oldest and still the widely used application of Solar Energy Various methods of building heating and other general aspects such as building form and functions are also described Various components of active solar heating of building like solar collector storage system control unit auxiliary heat source etc are discussed very briefly Three types of solar active heating of buildings like Solar air systems solar liquid systems and solar assisted heat pump systems are discussed in detail in this chapter Design details and performance of nine typical solar houses which are in use in different climatic conditions and using some newer concepts are also discussed in depth in this chapter

Solar Technologies for Buildings Ursula Eicker, 2006-08-14 A complete overview of solar technologies relevant to the built environment including solar thermal energy for heating and cooling passive solar energy for daylighting and heating supply and photovoltaics for electricity production Provides practical examples and calculations to enable component and system simulation e.g. Calculation of U values I V curve parameters and radiance distribution modelling Discusses the new trends in thermal energy use including the architectural integration of collector systems integrated ventilation photovoltaics facades and solar powered absorption cooling systems Coverage of cutting edge applications such as active and passive cooling techniques and results from ongoing research projects
