Parallel Genetic Algorithms Gabriel Luque, Enrique Alba, 2011-06-15. This book is the result of several years of research trying to better characterize parallel genetic algorithms (pGAs) as a powerful tool for optimization, search and learning. Readers can learn how to solve complex tasks by reducing their high computational times. Dealing with two scientific fields, parallelism and GAs, is always difficult and the book seeks to gracefully introduce from basic concepts to advanced topics. The presentation is structured in three parts. The first one is targeted to the algorithms themselves, discussing their components, the physical parallelism and best practices in using and evaluating them. A second part deals with the theory for pGAs, with an eye on theory to practice issues. A final third part offers a very wide study of pGAs as practical problem solvers, addressing domains such as natural language processing, circuits design, scheduling and genomics. This volume will be helpful both for researchers and practitioners. The first part shows pGAs to either beginners and mature researchers looking for a unified view of the two fields, GAs and parallelism. The second part partially solves and also opens new investigation lines in theory of pGAs. The third part can be accessed independently for readers interested in applications. The result is an excellent source of information on the state of the art and future developments in parallel GAs.

Computational Science and Its Applications - ICCSA 2004 Antonio Laganà, Marina L. Gavrilova, Vipin Kumar, Youngsong Mun, C.J. Kenneth Tan, Osvaldo Gervasi, 2004-05-07. The natural mission of Computational Science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems. For this reason, Computational Science, though originating from the need to solve the most challenging problems in science and engineering, computational science is the key player in the fight to gain fundamental advances in astronomy, biology, chemistry, environmental science, physics and several other scientific and engineering disciplines. It is increasingly turning its attention to all fields of human activity. In all activities in fact, intensive computation, information

handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms As a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications interoperable and ubiquitous Numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 International Conference on Computational Science and its Applications ICCSA 2004 held in Assisi Italy May 14-17 2004 18as jornadas argentinas de informática e investigación operativa : Buenos Aires, 22 al 25 de agosto de 1989 Sociedad Argentina de Informática e
