Complete mathematical derivations are given. Both stabilized and strapdown mechanizations are treated in detail. Derived algorithms to process sensor data and a comprehensive explanation of the error dynamics provide not only an analytical understanding but also a practical implementation of the concepts. A self-contained description of GPS with emphasis on kinematic applications is one of the highlights in this book. The text is of interest to geodesists including surveyors, mappers and photogrammetrists, to engineers in aviation, navigation, guidance, transportation and robotics, and to scientists involved in aerogeophysics and remote sensing.
