Ganzha,Ernst W. Mayr,Evgenii V. Vorozhtsov,2012-12-06 The development of powerful computer algebra systems has considerably ex tended the scope of problems of scientific computing which can now be solved successfully with the aid of computers However as the field of applications of computer algebra in scientific computing becomes broader and more complex there is a danger of separation between theory systems and applications For this reason we felt the need to bring together the researchers who now ap ply the tools of computer algebra for the solution of problems in scientific computing in order to foster new and closer interactions CASC 99 is the second conference devoted to applications of computer al gebra in scientific computing The first conference in this sequence CASC 98 was held 20 24 April 1998 in St

Petersburg Russia This volume contains revised versions of the papers submitted by the par ticipants and accepted by the program committee after a thorough reviewing process The collection of papers included in the proceedings covers various topics of computer algebra methods algorithms and software applied to scien tific computing symbolic numeric analysis and solving differential equations efficient computations with polynomials groups matrices and other related objects special purpose programming environments application to physics mechanics optics and to other areas In particular a significant group of papers deals with applications of com puter algebra methods for the solution of current problems in group theory which mostly arise in mathematical physics   *Design and Implementation of Symbolic Computation Systems* Alfonso Miola,1993-09-02 This volume constitutes the proceedings of the International Symposium on Design and Implementation of Symbolic Computation Systems DISCO 93 held in Gmunden Austria in September 1993 The growing importance of systems for symbolic computation has greatly influenced the decision of organizing this third conference in the series DISCO 93 focuses mainly on the most innovative methodological and technological aspects of the design and implementation of hardware and software systems for symbolic and algebraic computation automated reasoning geometric modeling and computation and automatic programming The general objective of DISCO 93 is to present an up to date view of the field and to serve as a forum insymbolic computation for the scientific exchange among academic industrial and user communities Besides invited talks by Buchberger Monagan Omodeo and Hong the volume contains 28 contributions carefully selected by a highly competent international program committee from a total of 56 submissions   Relativity and Scientific Computing Friedrich W Hehl,Roland A. Computer Algebra and Theorem Proving Clemens Ballarin,1999 Abstract Is the use of computer algebra technology beneficial for mechanised reasoning in and about mathematical domains Usually it is assumed that it is Many works in this area however either have little reasoning content or use symbolic computation only to simplify expressions In work that has achieved more the used methods do not scale up They trust the computer algebra system either too much or too little Computer algebra systems are not as rigorous as many provers They are not logically sound reasoning systems but collections of algorithms We classify soundness problems that occur in computer algebra systems While many algorithms and their implementations are perfectly trustworthy the semantics of symbols is often unclear and leads to errors On the other hand more robust approaches to interface external reasoners to provers are not always practical because the mathematical depth of proofs algorithms in computer algebra are based on can be enormous Our own approach takes both trustworthiness of the overall system and efficiency into account It relies on using only reliable parts of a computer algebra system which can be achieved by choosing a suitable library and deriving specifications for these algorithms from their literature We design and implement an interface between the prover Isabelle and the computer algebra library Sumit sic and use it to prove non trivial theorems from coding theory This is based on the mechanisation of the algebraic theories of rings and polynomials Coding theory is an area where proofs do have a substantial amount of computational content Also it is realistic to assume that the verification of an encoding or decoding device could be undertaken in and indeed be simplified by such a system The

reason why semantics of symbols is often unclear in current computer algebra systems is not mathematical difficulty but the design of those systems For Gaussian elimination we show how the soundness problem can be fixed by a small extension and without losing efficiency This is a prerequisite for the efficient use of the algorithm in a prover   *Euromath Bulletin* ,1996-06   **Notices of the American Mathematical Society** American Mathematical Society,1994   *Applied Algebra, Algebraic Algorithms, and Error-correcting Codes* ,1997   *ACM Transactions on Programming Languages and Systems* Association for Computing Machinery,1997   **Modern Group Analysis: Advanced Analytical and Computational Methods in Mathematical Physics** Nail H.
