Federal Aviation Administration, 1988 **The Handbook of Operator Fatigue** Gerald Matthews, P.A. Hancock, 2017-11-01 Fatigue is a recognized problem in many facets of the human enterprise It is not confined to any one area of activity but enters all situations in which humans have to perform for extended intervals of time Most problematic are the circumstances in which obligatory action is continuous and the results of failure are evidently serious or even catastrophic Therefore the modern media especially highlights fatigue related failures in industries such as transportation materials processing and healthcare It can be and indeed is no coincidence that most of the spectacular failures in process control that have resulted in the world's largest industrial accidents have occurred in the small hours of the morning when the circadian rhythm is lowest and operator fatigue itself peaks While there have been legislative efforts made at state federal and international levels to regulate working hours of employees the appropriate implementation of such legislation is still a long way off The Handbook of Operator Fatigue provides a comprehensive account of the subject to serve as the definitive reference work for researchers students and practitioners alike The volume features 30 chapters written by experts from around the world to address each important facet of fatigue including the scale of the fatigue problem Section I the nature of fatigue Section II how to assess fatigue Section III the impact of fatigue on health Section IV fatigue in the workplace Section V the neurological basis of fatigue VI sleep disorders VII and the design of countermeasures to fatigue VIII *Human Factors Guidelines for Air Traffic Management (ATM) Systems*, 2000 *Japan Company Handbook*, 1990 *Aviation Psychology: Practice and Research* Klaus-Martin Goeters, 2017-03-02 In the well established aviation system the importance of sound human factors practice based on good aviation psychology research is obvious from

Automation and Human Performance Raja Parasuraman, Mustapha Mouloua, 2018-01-29 There is perhaps no facet of modern society where the influence of computer automation has not been felt Flight management systems for pilots diagnostic and surgical aids for physicians navigational displays for drivers and decision aiding systems for air traffic controllers represent only a few of the numerous domains in which powerful new automation technologies have been introduced The benefits that have been reaped from this technological revolution have been many At the same time automation has not always worked as planned by designers and many problems have arisen from minor inefficiencies of operation to large scale catastrophic accidents Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient The influence of automation technology on human performance has often been investigated in a fragmentary isolated manner with investigators conducting disconnected studies in different domains There has been little contact between these endeavors although principles gleaned from one domain may have implications for another Also with a few exceptions the research has tended to be empirical and only theory driven In recent years however various groups of investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology This book presents the current theories and assesses the impact of automation on different aspects of human performance Both basic and applied research is presented to highlight the general principles of human computer interaction in several domains where automation technologies are widely implemented The major premise is that a broad based theory driven approach will have significant implications for the effective design of both current and future automation technologies This volume will be of considerable value to researchers in human
