Tools for the Job

TIRE LEVER

Tire levers are used to pry bicycle tires away from the rim without damaging the rim, tire, or tube.

SCREWDRIVER

A small Phillips head screwdriver will help in tightening and adjusting parts. Also have hex keys on hand to tighten bike joints.

DE-GREASER

... and fresh grease. This will fix squeaky spots or pivot points that are a little sticky. Also have oil on hand to keep your bike chain running smoothly.

RAGS & TOWELS

A fresh supply of rags will help keep your bike clean and free of dust and debris. Bikes also have handy specialized cleaning equipment such as chain cleaners.

PREVENTION

- Remove the wheel from the frame. Deflate the tire.
- Use two tire levers to pry behind the rim. Set the levers about 6 in. apart, and pull the lip of the tire to the outside of the rim.
- Slide the tire levers away from each other to free the tire from the rim.
- Remove the tube. Now you can either replace the tube or patch the leak following a patch kit's instructions.
- Thread in the deflated tube and work the tire back onto the bike with the levers.

- Loud, grinding or squeaky gears are often the result of poor chain maintenance.
- Clean the chain using a rag and de-greaser or a chain cleaner. Reapply chain lube to the chain.
- Also clean and re-grease chain rings.
- Test ride the bike. If gears are still loud or are not switching properly, it may be best to see a bicycle specialist at your local bicycle shop. Derailleur adjustments are subtle and finicky.

- Squeaky brakes occur when brake pads are worn or aligned improperly.
- Examine the brake pads. If they are worn past the grooves they need to be replaced. Purchase new pads, and follow directions for installation.
- If brake pads aren't worn, clean the wheel of debris and residue. Test ride.
- Still squeaking? Your wheel may be unbalanced. You can do this yourself, but it is a subtle process. Seek advice from a bike specialist.

- The most common repairs bike shops perform are flat tires. Getting a flat is easily preventable—simply check tire pressure occasionally. Most flats are caused by riding on improperly aired tires.
- Keep your bike out of the elements. Rain can quickly rust parts and corrode paint. Clean dirty parts.
- A rusty chain is OK, but avoid rust by keeping the chain clean and greased. Check a chain for any hairline cracks and replace if any are present.
