Version 9 is the new 64 bit incarnation of SPARC, the most significant change since SPARC's introduction in 1987. Unlike other RISC Reduced Instruction Set Computer designs, SPARC specifies not a hardware implementation chip but an open standard architecture belonging to the community of SPARC vendors and users. The SPARC specification is defined by the SPARC Architecture Committee, a technical arm of the computer maker consortium SPARC International. Version 9 provides 64 bit data and addressing support for fault tolerance, fast context switching support for advanced compiler optimizations, efficient design for Superscalar processors and a clean structure for modern operating systems. The V9 architecture supplements rather than replaces the 32 bit Version 8 architecture. The non-privileged features of Version 9 are upward compatible from Version 8 so 32 bit

application software can execute natively without modification on Version 9 systems no special compatibility mode is required Publication of the Version 9 architecture marks a three year development effort by SPARC International member companies from a broad cross section of disciplines Chilton's Truck and Van Repair Manual, 1977-1984 ,1984
