

Fine adjustment knob- move into focus , protrudes out

Mechanical stage adjustment- moves the stage left & right & back & forth

Condenser on bottom of stage- focuses the light source, adjusts diameter of the light beam

Increase magnification= increase (decrease?) field of view

Move stage, start over with lower objective

- don't use the coarse adjustment knob then to avoid cracking lenses

Use oil emergent on 100x objective , has optical properties to glass, helps with magnification

- to do it, put on high power rotate to middle and high power (in between) , small drop on slip, rotate then 100x on emergent oil (to rest in it)

- now can use fine adjustment knob to view the image

When done, rotate so the lower power objective is in place (then bring stage all the way down)

Remove slide, clean lenses again to be ready to use the microscope again!
