The book is primarily directed towards computer science students in the third or final year of an undergraduate degree course It is assumed that the reader is familiar with the standard mathematical notation for sets and with the mathematical concept of proof in particular proof by induction The reader should have attended a course on the design of algorithms and data structures preferably one in which the use of loop invariants to provide correctness proofs is an integral part It is also preferable if the reader is familiar with PASCAL However I have always made a clear distinction between algorithms and programs so that the former can be understood without reference to any specific programming language
