*Rethinking Popper* Zuzana Parusníková,Robert S. Cohen,2009-03-13 In September 2007 more than 100 philosophers came to Prague with the determination to approach Karl Popper's philosophy as a source of inspiration in many areas of our intellectual endeavor This volume is a result of that effort Topics cover Popper's views on rationality scientific methodology the evolution of knowledge and democracy and since Popper's philosophy has

always had a strong interdisciplinary influence part of the volume discusses the impact of his ideas in such areas as education economics psychology biology or ethics The concept of falsification the problem of demarcation the ban on induction or the role of the empirical basis along with the provocative parallels between historicism holism and totalitarianism have always caused controversies The aim of this volume is not to smooth them but show them as a challenge In this time when the traditional role of reason in the Western thought is being undermined Popper s non foundationist model of reason brings the Enlightenment message into a new perspective Popper believed that the open society was vulnerable due precisely to its tolerance of otherness This is a matter of great urgency in the modern world as cultures based on different values gain prominence The processes related to the extending of the EU or the increasing economic globalization also raise questions about openness and democracy The volume s aim is to show the vitality of critical rationalism in addressing and responding to the problems of this time and this world

**Karl Popper and the Two New Secrets of Life** Hans-Joachim Niemann, 2014-07-17. The story of how humans and all living things came into existence is told in two widely believed versions the Book of Genesis and Darwin's Origin of Species. It was the philosopher Karl Popper who presented us with a third story no less important. His New Interpretation of Darwinism denies the creative power of blind chance and natural selection and establishes knowledge and activity of all living beings as the real driving forces of evolution. Thus spiritual elements are back in the theory of evolution and in Popper's view the entire evolution is an adventure of the mind. In this book Hans Joachim Niemann establishes Karl Popper as an eminent philosopher of biology. In the first chapter biographical details are unearthed concerning how Popper's biological interests were inspired by a biological meeting in the old windmill at Hunstanton in 1936. The second chapter focusses on the year 1986 when Popper in several lectures summarized the results of his life long biological thinking. The most important of these the Medawar Lecture given at the Royal Society London was lost for a long time and is now printed in the Appendix. A new world view begins to emerge that is completely different from Creationism or Darwinism. Twenty years after Popper's death the last chapter looks back on his biological thoughts in the light of new results of molecular biology. His attack at that time on long lasting dogmas of evolutionary theory turned out to be largely justified. The new biology seems even well suited to support Popper's endeavour to overcome the gloomy aspects of Darwinism that have made organisms passive parts of a machinery of deadly competition. Neither blind chance nor natural selection are the creative forces of all life but rather knowledge and activity. How they came into existence is still a secret and a worthwhile research programme.
