### Features

- Installing and Configuring CodeVisionAVR to Work with the Atmel STK500 Starter Kit and AVR Studio® Debugger
- Creating a New Project Using the CodeVisionAVR Automatic Program Generator
- Editing and Compiling the C Code
- Loading the Executable Code into the Target Microcontroller on the STK500 Starter Kit

### Introduction

The purpose of this application note is to guide the user through the preparation of an example C program using the CodeVisionAVR C compiler. The example, which is the subject of this application note, is a simple program for the Atmel AT90S85-15 microcontroller on the STK500 starter kit.

### Preparation

Install the CodeVisionAVR C Compiler in the default directory: C:\cwavr.

Install the Atmel AVR Studio debugger in the default directory:

C:\Program Files\Atmel\AVR Studio.

The demonstration program to be developed in the next few pages requires an Atmel AT90S85-15 microcontroller and the STK500 starter kit.

Set up the starter kit according to the instructions in the STK500 User Guide.

Make sure the power is off and insert the AT90S85-15 chip into the appropriate socket marked SCKT300003.

Set the VTARGET, RESET, and XTAL1 jumpers. Also set the OSCSEL jumper between pins 1 and 2.

Connect one 10-pin ribbon cable between the PORTB and LEDs headers.

This will allow displaying the state of AT90S85-15's PORTB outputs.

Connect one 6-pin ribbon cable between the ISPSPIN and SPROG3 headers.

This will allow the CodeVisionAVR IDE to automatically program the AVR chip after a successful compilation.

In order to use this feature, one supplementary setting must be done:

Open the CodeVisionAVR IDE and select the "Settings\Programmer" menu option.

The dialog window as shown in Figure 1 will open.

**BASCOM-Avr Programming** Jurij Mikeln, 2012-07-18 Format A4 212 pages This easy to understand manual is both a useful learning tool and a good reference manual to keep handy on your workbench Starting out with the basics of microcontroller programming it proceeds to cover intermediate and advanced topics of Atmel's AVR Microcontroller family The programming aspect of the book focuses on the widely popular Bascom AVR compiler which is a very user friendly Basic compiler IDE developed in the Netherlands Throughout the book practical projects are included at various levels of complexity to match the subjects in the various chapters Inputs Outputs In microcontroller applications push buttons are used in most cases How to use them without unwanted contact bounce what is debouncing anyway how we can intelligently increase the number of I/O pins of a microcontroller driving DC motors and becoming familiar with PWM are topics of this chapter Get your hands on an AVR microcontroller with help from Bascom AVR and start controlling the world around you Data Displays Data displays are very important in the world of microcontrollers With modern graphic LCD displays one can design smart looking products But in some cases the classic 2x16 alphanumeric LCD or even 7 segment LED display is better suited If you have a limited number of I/O pins on your microcontroller you might even want to connect your LCD via an SPI interface All this is covered in this chapter Pick the right display and make sure that your product will stand out Data Measurements Human beings live in an analogue world and feel comfortable there But this is not so for microcontrollers which live in a digital world After successfully measuring data we have to transform it into digital values We can do this in many ways by using smart sensors and smart programming to get temperature air pressure or even a GPS location all with AVR's Get familiar with data measurements using Bascom AVR Development tools Having programmed microcontrollers for many years we have become regular users of development boards There are many available on the market Some expensive ones attempt to achieve universality by handling many different MCU models and including many different peripherals on board Others are nothing more than a break out board for a specific MCU device In contrast we have designed optimal development boards that will meet most of your requirements while writing testing your AVR programs These boards emerged from extensive usage in our daily work so there are very good reasons why our tools are designed as illustrated in this chapter Use smart tools when writing your Bascom AVR programs Practical Projects There should be many practical projects in every book for programmers and this book is no exception Bascom AVR in conjunction with AVR microcontrollers is a winning combination when designing a simple but very powerful I2C analyzer Other projects like a Frequency generator Frequency counter a simple but accurate clock and a Metal detector are just a few of the projects that can be found in this chapter AVR microcontrollers are user friendly so get to know them better
