Butts, Jaakko Hintikka, 2012-12-06

The Fifth International Congress of Logic Methodology and Philosophy of Science was held at the University of Western Ontario London Canada 27 August to 2 September 1975 The Congress was held under the auspices of the International Union of History and Philosophy of Science Division of Logic Methodology and Philosophy of Science and was sponsored by the National Research Council of Canada and the University of Western Ontario As those associated closely with the work of the Division over the years know well the work undertaken by its members varies greatly and spans a number of fields not always obviously related In addition the volume of work done by first rate scholars and scientists in the various fields of the Division has risen enormously For these and related reasons it seemed to the editors chosen by the Divisional officers that the usual format of publishing the proceedings of the Congress

be abandoned in favour of a somewhat more flexible and hopefully acceptable method of presentation Accordingly the work of the invited participants to the Congress has been divided into four volumes appearing in the University of Western Ontario Series in Philosophy of Science The volumes are entitled Logic Foundations of Mathematics and Computability Theory Foundational Problems in the Special Sciences Basic Problems in Methodology and Linguistics and Historical and Philosophical Dimensions of Logic Methodology and Philosophy of Science

Algorithms and Complexity in Mathematics, Epistemology, and Science Nicolas Fillion, Robert M. Corless, Ilias S. Kotsireas, 2019-02-07 ACMES Algorithms and Complexity in Mathematics Epistemology and Science is a multidisciplinary conference series that focuses on epistemological and mathematical issues relating to computation in modern science This volume includes a selection of papers presented at the 2015 and 2016 conferences held at Western University that provide an interdisciplinary outlook on modern applied mathematics that draws from theory and practice and situates it in proper context These papers come from leading mathematicians computational scientists and philosophers of science and cover a broad collection of mathematical and philosophical topics including numerical analysis and its underlying philosophy computer algebra reliability and uncertainty quantification computation and complexity theory combinatorics error analysis perturbation theory experimental mathematics scientific epistemology and foundations of mathematics By bringing together contributions from researchers who approach the mathematical sciences from different perspectives the volume will further readers understanding of the multifaceted role of mathematics in modern science informed by the state of the art in mathematics scientific computing and current modeling techniques

The Semantic Conception of Theories and Scientific Realism Frederick Suppe, 1989 An authoritative account of the semantic conception of theories by one of its chief developers Suppe has always seen the semantic conception as providing a way of moving beyond empiricist philosophies of science This book provides the definitive account of his views not only on the issue of realism but also on a variety of other issues central to the philosophy of science Ronald N Giere author of *Explaining Science A Cognitive Approach*

[The Logic in Philosophy of Science](#) Hans Halvorson, 2019-07-11 Major figures of twentieth century philosophy were enthralled by the revolution in formal logic and many of their arguments are based on novel mathematical discoveries Hilary Putnam claimed that the Löwenheim-Skolem theorem refutes the existence of an objective observer independent world Bas van Fraassen claimed that arguments against empiricism in philosophy of science are ineffective against a semantic approach to scientific theories W V O Quine claimed that the distinction between analytic and synthetic truths is trivialized by the fact that any theory can be reduced to one in which all truths are analytic This book dissects these and other arguments through in depth investigation of the mathematical facts undergirding them It presents a systematic mathematically rigorous account of the key notions arising from such debates including theory equivalence translation reduction and model The result is a far reaching

reconceptualization of the role of formal methods in answering philosophical questions The Logical Foundations of Scientific Theories Decio Krause, Jonas R.B. Arenhart, 2016-07-15 This book addresses the logical aspects of the foundations of scientific theories Even though the relevance of formal methods in the study of scientific theories is now widely recognized and regaining prominence the issues covered here are still not generally discussed in philosophy of science The authors focus mainly on the role played by the underlying formal apparatuses employed in the construction of the models of scientific theories relating the discussion with the so called semantic approach to scientific theories The book describes the role played by this metamathematical framework in three main aspects considerations of formal languages employed to axiomatize scientific theories the role of the axiomatic method itself and the way set theoretical structures which play the role of the models of theories are developed The authors also discuss the differences and philosophical relevance of the two basic ways of axiomatizing a scientific theory namely Patrick Suppes set theoretical predicates and the da Costa and Chuaqui approach This book engages with important discussions of the nature of scientific theories and will be a useful resource for researchers and upper level students working in philosophy of science
