Atmospheric Pollution Mark Z. Jacobson, 2002-09-05 This book provides a comprehensive introduction to the history and science of major air pollution issues It begins with an introduction to the basic atmospheric chemistry and the history of discovery of chemicals in the atmosphere

and then moves on to a discussion of the evolution of the earth's atmosphere and the structure and composition of the present day atmosphere. It also offers a comprehensive and accessible discussion of the five major atmospheric pollution topics: urban outdoor air pollution, indoor air pollution, acid deposition, stratospheric ozone reduction, and global climate change. *Journal of Geoscience Education*, 1996

Environmental Science: A Global Concern William Cunningham, Mary Ann Cunningham, 2009-09-18. Environmental Science: A Global Concern, Eleventh Edition, is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one or two semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. We have updated data throughout the chapters in this book. Information and examples presented are the most recent available as of the mid 2009. You will find an abundance of specific numbers and current events details that are difficult to keep up to date in a textbook. The goal of this book is to provide an up to date introductory global view of essential themes in environmental science along with emphasis on details and case studies that will help students process and retain the general principles. Because most students who will use this book are freshman or sophomore non-science majors, the authors make the text readable and accessible without technical jargon or a presumption of prior science background.

Air Pollution Jerry S. Kidd, Renee A. Kidd, 2005. Examines the causes of atmospheric pollution, acid rain, ozone depletion, and global warming and explains how these conditions affect human health and economic prosperity. *Air Pollution and Climate Change* John K. Pearson, Richard Derwent, 2022-06-27. This book identifies four key forms of air pollution: indoor, urban, regional, and global. It discusses how these four types of pollution are manifest in today's society and examines the scientific and policy challenges that stand in the way of progress. Written in a style that balances scientific underpinnings with accessible language, Pearson and Derwent examine the sources and historical context of air pollutants before dedicating a chapter to each of the key forms. Armed with these basics, they begin to address the challenges faced by improving indoor, urban, and regional air quality whilst reducing global warming in the years ahead. This leads to a greater understanding of the challenges of global climate change with new proposals for reducing global warming. However, the authors conclude that it is only when we have a scenario of reforestation combined with reductions in emissions of all greenhouse gases that real progress will be made in the fight against climate change. Then, air pollution will also be consigned to history. With a foreword written by Professor James Lovelock, this book will be of great interest to students and scholars of climate change and environmental policy, as well as air quality professionals working in this important field.

Pollution: Problems & Solutions National Wildlife Federation, 1998. Like it or not, our children are inheriting a polluted world. By studying the effect of toxins on wildlife, understanding the societal problems posed by pollution, and participating in recycling and clean up projects, kids can become proactive in preserving the future of our planet.
