

PART 1 - GENERAL
ALI NO. 55-20-07

1. DESCRIPTION

- A. This procedure covers the inspection of the sandwich structure of the elevator panels using thermographic technique for trapped water inside the honeycomb core cells.
- B. This inspection is to be done from the outside after artificial thermal excitation of the elevator.
- C. Three alternative thermal excitation methods can be applied:
 - METHOD A: Heating the whole elevator inside an oven.
 - METHOD B: Heating the elevator with blankets.
 - METHOD C: Cooling the whole elevator inside a refrigerator.
- D. Inspection must be performed away from any type of hot or cold source and in ambient temperature within the range of 10 to 30° C (50 to 86° F).
- E. In order to perform this inspection two people are recommended, one NDT inspector and one assistant. The assistant will scan the inspection areas and the inspector will mark out the trapped water areas on the skin.

NOTE: AIRBUS gives a specific thermographic course for this inspection. AIRBUS recommends you do this training course before you do this inspection.

- F. For those thermographic trapped water indications partially hidden by lightning strips, a X-Ray inspection procedure is provided. This X-Ray inspection is an alternative procedure to remove the lightning strip and repeat the thermographic inspection.
