

REVISED EDITION

# AMPHIBIANS AND REPTILES OF DELMARVA

James F. White, Jr  
Amy Wendt White

# Amphibians And Reptiles Of Delmarva

**Maryland Herpetological Society**

## **Amphibians And Reptiles Of Delmarva:**

**Amphibians and Reptiles of Delmarva** James F. White, 2009-06-30 Because of its geographic position and its geologic past the Delmarva Peninsula is a transition zone between the northern and southern sections of the Atlantic Coast of North America. The north south influences result in a high diversity of species of plants and animals including amphibians and reptiles. Delmarva's amphibians and reptiles are overlooked by the vast majority of people living in the area. Many have never heard a northern spring peeper call or seen a salamander even though a breeding chorus of peepers is common in the spring and salamanders are residents of most woodlands in Delmarva. Misconceptions also abound. For example people sometimes think they have seen cottonmouths water moccasons on Delmarva though this venomous species is not known to occur north of the mouth of the Chesapeake Bay. Other common fallacies are the belief that snakes are slimy or that handling a toad can cause warts. This updated field guide to amphibians and reptiles of Delmarva will be useful to everyone interested in these fascinating creatures from the curious child who brings home a salamander to students experienced naturalists and professionals in need of life history behavioral and distributional information on Delmarva's amphibians, salamanders and frogs and reptiles turtles lizards and snakes. Seventy three species are included in this second edition seventy known to occur on Delmarva and three that the authors believe either occur there or once did. Outstanding color plates aid in identifying the species.

**The Maryland Amphibian and Reptile Atlas** Heather R. Cunningham, Nathan H. Nazdrowicz, 2018-11-26 The definitive resource for finding, identifying, and conserving Maryland's amphibians and reptiles. Naturalists, herpetologists, and ecologists alike agree that tracking herpetofauna is a challenging undertaking. Scientists are concerned about the decline of once familiar species but evidence has often been too anecdotal to support firm conclusions. To better understand the distribution of amphibians and reptiles in Maryland and forecast species futures in a time of accelerated environmental threats, conducting a comprehensive statewide survey updating 1970s era distribution maps seemed ideal. However, this endeavor was of an impossibly ambitious scope for scientists alone to tackle. Enter the Maryland Amphibian and Reptile Atlas project, comprising nearly a thousand dedicated citizen scientists who discovered and recorded the locations of herpetofauna throughout every corner of Maryland. In *The Maryland Amphibian and Reptile Atlas*, Heather R. Cunningham and Nathan H. Nazdrowicz present the findings of this massive undertaking. This definitive guide combines nearly 160 comprehensive new herpetological maps with historical distribution maps and in-depth species accounts. Color photos illustrate the natural history of the 89 species of frogs, salamanders, turtles, snakes, and lizards that call the state home. Essays discuss historical studies, the effects of Maryland's current climate, geology, and habitat diversity, and the myriad conservation issues these animals face. This richly detailed book represents a triumph of citizen science and the culmination of an intensive research partnership. It will appeal to both amateurs and professionals interested in herpetology, natural history, or ecology, as well as those with a special interest in Maryland's biodiversity.
