Understanding and Cultivating Well-being for the Pediatrician Sarah Webber, Jessica Babal, Megan A. Moreno, 2022-11-30

With growing attention surrounding the importance of physician well being organizations are institutionalizing physician well being efforts Promoting well being requires a understanding of the components barriers and promoters of physician well being While other books exist in this space many are focused on individual resilience building strategies or are too broad to apply to specific groups of physicians such as pediatricians A critical gap in the existing literature is a book that uses an evidence based model of well being and applying this model to unique experience of pediatricians Rather than a work centric approach the physician well being model we describe in this book takes a comprehensive approach to well being integrating evidence and expertise from a broad body of well being research and translating this knowledge to the lives and work of pediatricians Further while other texts focus on negative consequences of a lack of well being such as burnout this text is organized around defining understanding and optimizing well being Each chapter will provide strategies for both individual pediatricians and healthcare organizations to consider to improve pediatrician well being at their institution This book integrates well being science from disciplines outside of medicine offering innovative strategies to addressing this important issue This is a book designed for pediatricians health care leaders and organizations looking to better understand and implement strategies for pediatrician well being The authors will take readers on a journey through the history of physician well being leading to the current state of well being in the context of modern medical practice technology society policy and family life Using an integrated model of physician well being readers will learn about the current state solutions tensions and future directions of physician well being

The Spirit of Global Health Simon Peng-Keller, Fabian Winiger, Raphael Rauch, 2022-07-21 Since the beginning of the World Health Organization many of its staff members regional offices member states and directors general have grappled with the question of what a spiritual dimension of health looks like and how it might enrich the health policies advocated by their organisations Contrary to the wide spread perception that spirituality is primarily related to palliative care and has emerged relatively recently within the organisation this study shows that its history is considerably longer and more complex and has been closely connected to the WHO's ethical aspirations its quest for more holistic and equitable healthcare and its struggle with the colonial legacy of international health organisations While such ideals and struggles silently motivated many of the key actors and policies such as the provision of universal primary healthcare which for decades have embodied the organisation's loftiest aspirations the WHO's official relationship with spirituality advanced in fits leaps and setbacks At times creative and interdisciplinary at others deeply political this process was marked by cycles of institutional forgetting and remembering Rather than as a triumph of religious lobbyists this
