**Excursions in Harmonic Analysis, Volume 5** Radu Balan, John J. Benedetto, Wojciech Czaja, Matthew Dellatorre, Kasso A. Okoudjou, 2017-06-20 This volume consists of contributions spanning a wide spectrum of harmonic analysis and its applications written by speakers at the February Fourier Talks from 2002 2016 Containing cutting edge results by an impressive array of mathematicians engineers and scientists in academia industry and government it will be an excellent reference for graduate students researchers and professionals in pure and applied mathematics physics and engineering Topics covered include Theoretical harmonic analysis Image and signal processing Quantization Algorithms and representations The February Fourier Talks are held annually at the Norbert Wiener Center for Harmonic Analysis and Applications Located at the University of Maryland College Park the Norbert Wiener Center provides a state of the art research venue for the broad emerging area of mathematical engineering

**The Mojette Transform** Jeanpierre Guédon, 2013-03-04 Applied sciences in the 20th century have developed and used unitary transforms for concentrating energy Now the challenge lies in the expression and use of redundancy to build redundant systems The Mojette transform is a very simple transform using only additions but with strong properties that break this challenge The first part of the book gives the basics of the Mojette transform both mathematically and the corresponding optimal algorithms The second part exemplifies its use through different fields image representation watermarking medical imaging distributed storage information and cryptography This book about a discrete exact Radon transform explains how to usefully produce and cope with redundancy for solving 21st century problems

Computer Vision and Graphics Leonard Bolc, Ryszard Tadeusiewicz, Leszek J. Chmielewski, Konrad Wojciechowski, 2010-09-14 Annotation This book is part I of a two volume work that contains the refereed proceedings of the International Conference on Computer Vision and Graphics ICCVG 2010 held in Warsaw Poland in September 2010 The 95 revised full papers presented were carefully reviewed and selected from numerous submissions The papers are organized in three topical sections advances in pattern recognition machine vision and image understanding human motion analysis and synthesis and computer vision and graphics

**Beyond Wavelets** Grant Welland, 2003-12-11 Beyond Wavelets presents state of the art theories methods algorithms and applications of mathematical extensions for classical wavelet analysis Wavelets introduced 20 years ago by Morlet and Grossmann and developed very rapidly during the 1980 s and 1990 s has created a common link between computational mathematics and other disciplines of science and engineering Classical wavelets have provided effective and efficient mathematical tools for time frequency analysis which enhances and replaces the Fourier approach However with the current advances in science and technology there is an immediate need to extend wavelet mathematical tools as well Beyond Wavelets presents a list of ideas and mathematical foundations for such extensions including continuous and digital ridgelets brushlets steerable wavelet packets contourlets eno wavelets spline wavelet frames and quasi affine wavelets Wavelet subband algorithms are extended to

pyramidal directional and nonuniform filter banks In addition this volume includes a method for tomographic reconstruction using a mechanical image model and a statistical study for independent adaptive signal representation Investigators already familiar with wavelet methods from areas such as engineering statistics and mathematics will benefit by owning this volume Curvelets Contourlets Ridgelets Digital Implementation of Ridgelet Packets Steerable Wavelet Packets Essentially Non Oscillatory Wavelets Medical Imaging Non Uniform Filter Banks Spline wavelet frames and Vanishing Moment Recovery Functions

*Beyond Sobolev and Besov* Cornelia Schneider, 2021-05-31 This book investigates the close relation between quite sophisticated function spaces the regularity of solutions of partial differential equations PDEs in these spaces and the link with the numerical solution of such PDEs It consists of three parts Part I the introduction provides a quick guide to function spaces and the general concepts needed Part II is the heart of the monograph and deals with the regularity of solutions in Besov and fractional Sobolev spaces In particular it studies regularity estimates of PDEs of elliptic parabolic and hyperbolic type on non smooth domains Linear as well as nonlinear equations are considered and special attention is paid to PDEs of parabolic type For the classes of PDEs investigated a justification is given for the use of adaptive numerical schemes Finally the last part has a slightly different focus and is concerned with traces in several function spaces such as Besov and Triebel Lizorkin spaces but also in quite general smoothness Morrey spaces The book is aimed at researchers and graduate students working in regularity theory of PDEs and function spaces who are looking for a comprehensive treatment of the above listed topics
