**Aha! A Two Volume Collection** Martin Gardner, 2006-12-14 A collection of puzzles that challenge reasoning power and intuition and help develop problem solving ability     The Early Mathematics of Leonhard Euler C. Edward Sandifer, 2020-07-14 The Early Mathematics of Leonhard Euler gives an article by article description of Leonhard Euler's early mathematical works the 50 or so mathematical articles he wrote before he left St Petersburg in 1741 to join the Academy of Frederick the Great in Berlin These early pieces contain some of Euler's greatest work the Konigsberg bridge problem his solution to the Basel problem and his first proof of the Euler Fermat theorem It also presents important results that we seldom realize are due to Euler that mixed partial derivatives are usually equal our  $f_x f_x$  notation and the integrating factor in differential equations The book shows how contributions in diverse fields are related how number theory relates to series which in turn relate to elliptic integrals and then to differential equations There are dozens of such strands in this beautiful web of mathematics At the same time we see Euler grow in power and sophistication from a young student when at 18 he published his first work on differential equations a paper with a serious flaw to the most celebrated mathematician and scientist of his time It is a portrait of the world's most exciting mathematics between 1725 and 1741 rich in technical detail woven with connections within Euler's work and with the work of other mathematicians in other times and places laced with historical context     **The Magic Numbers of the Professor** Owen O'Shea, Underwood Dudley, 2007-03-08 A fascinating collection of numerical curiosities and wonders The Professor in Owen O'Shea's book is the imaginary American Richard Stein As Owen O'Shea and the Professor travel through Ireland O'Shea notes the Professor's collection of amazing magic numbers in fascinating detail His mathematical curiosities are wide ranging concerning the 1915 sinking of the Lusitania to coincidences about Apollo 11 to the first moon walk to new numerical curiosities The new curiosities among many others center on Presidents Lincoln and Kennedy the USA and Ireland the two World Wars the King James Version of the Bible and James Joyce The Magic Numbers of the Professor reveals astonishing details about the year 1776 the year of American Independence It contains discussions on prime numbers gives some wonderful number patterns and reveals many other eye opening properties of numbers It asks for instance if you know in how many different ways a US dollar can be changed The Professor gives the answer to this and other currency questions The number of the Beast 666 is discussed as well as are many new equations involving that famous number all appearing here for the first time And for those fascinated by games and gambling a number of curious proposition bets involving dice darts and playing cards and various mathematical puzzles are scattered throughout this singularly entertaining book     **The Edge of the Universe** Deanna Haunsperger, Stephen Kennedy, 2006 Beautifully printed with 24 pages of full color Ideal for Math Clubs Math Horizons is a magazine that celebrates the people and ideas which are mathematics Containing the editor's selections from the first ten years of the magazine's existence this volume features exquisite expositions of undergraduate level mathematics Broad and

appealing the coverage also includes fiction with mathematical themes literary theatrical and cinematic criticism humor history and social history Mathematics is shown as a human endeavor through biographies and interviews of mathematicians and users of mathematics including artists writers and scientists The puzzles games and activities throughout make it a valuable resource for student math clubs Though especially appealing to students of mathematics from high school to graduate school and their teachers this collection is an eclectic and wide ranging look at the culture of mathematics and offers enjoyable reading for anyone with an interest in mathematics
