Beyond Networked City Infrastructure Reconfigurations:

Beyond the Networked City Olivier Coutard, Jonathan Rutherford, 2015-12-14 Cities around the world are undergoing profound changes. In this global era we live in a world of rising knowledge economies, digital technologies, and awareness of environmental issues. The so-called modern infrastructural ideal of spatially and socially ubiquitous centrally governed infrastructures providing exclusive homogeneous services over extensive areas has been the standard of reference for the provision of basic essential services such as water and energy supply. This book argues that after decades of undisputed domination, this ideal is being increasingly questioned and that the network ideology that supports it may be waning. In order to begin exploring the highly diverse, fluid, and unstable landscapes emerging beyond the networked city, this book identifies dynamics through which a break with previous configurations has been operated and new brittle zones of socio-technical controversy through which urban infrastructure and its wider meaning are being negotiated and fought over. It uncovers across a diverse set of urban contexts new ways in which processes of urbanization and infrastructure production are being combined with crucial sociopolitical implications through shifting political economies of infrastructure which rework resource distribution and value creation through new infrastructural spaces and territorialities which rebundle socio-technical systems for particular interests and claims and through changing offsets between individual and collective appropriation, experience, and mobilization of infrastructure. With contributions from leading authorities in the field and drawing on theoretical advances and original empirical material, this book is a major contribution to an ongoing infrastructural turn in urban studies and will be of interest to all those concerned by the diverse forms and contested outcomes of contemporary urban change across North and South.

Redeploying Urban Infrastructure Jonathan Rutherford, 2019-07-31 This book explores urban futures in the making as seen through the lens of urban infrastructure. The book describes how socio-technical arrangements of energy and water provision are being recast in continuing efforts towards realising sustainable transformation of cities. It critically investigates how infrastructure comes to matter by analyzing the shifting capacities and entanglements of diverse actors with these systems, the various means they use to envision, enact, and contest changes, and the wide-ranging social and political implications of emerging infrastructure transitions. Drawing on original research into urban infrastructure debates and projects in Stockholm and Paris, the author develops a novel conceptual framework for studying and acknowledging the active, vital role of infrastructure in constituting a material politics of urban transformation. Straddling the latest theoretical insights and empirical investigation of urban planning practice and socio-technical engineering of systems and flows, *Redeploying Urban Infrastructure* forges new timely reflections and perspectives which will be of interest to the growing multidisciplinary community of scholars investigating infrastructure and to academics and practitioners with a concern for understanding the wider politics of urban futures.

Handbook of Infrastructures and Cities Olivier Coutard, Daniel

Florentin,2024-04-12 Contributing towards a thriving research area this comprehensive Handbook presents a broad discussion of infrastructure as social phenomena It compiles diverse perspectives to delineate the current infrastructural turn and assess policy and research challenges relating to contemporary forms of infrastructural development **Critical Perspectives on Suburban Infrastructures** Pierre Filion,Nina M. Pulver,2019-05-06 Most new urban growth takes place in the suburbs consequently infrastructures are in a constant state of playing catch up creating repeated infrastructure crises in these peripheries However the push to address the tensions stemming from this rapid growth also allow the suburbs to be a major source of urban innovation Taking a critical social science perspective to identify political economic social and environmental issues related to suburban infrastructures this book highlights the similarities and differences between suburban infrastructure conditions encountered in the Global North and Global South Adopting an international approach grounded in case studies from three continents this book discusses infrastructure issues within different suburban and societal contexts low density infrastructure rich Global North suburban areas rapidly developing Chinese suburbs and the deeply socially stratified suburbs of poor Global South countries Despite stark differences between types of suburbs there are features common to all suburban areas irrespective of their location and similarities in the infrastructure issues confronting these different categories of suburbs Towards a Metropolitan Public Space Network João Rafael Santos,Maria Matos Silva,Ana Beja da Costa,2024-10-01 This book explores the hypothesis that public space if conceptualised imagined and shaped at the metropolitan scale through innovative territorial design approaches offers the possibility to interconnect and integrate various systems in search for synergic responses to emerging societal challenges that impact large urbanised landscapes The book offers a multidimensional and multi geographic framework to discuss the role of public space on contemporary metropolitan territories as part of MetroPublicNet Building the foundations of a Metropolitan Public Space Network to support the robust low carbon and cohesive city Projects lessons and prospects in Lisbon research project The reader will find a critical and overarching perspective on the conceptual methodological and empirical lenses that unfolded throughout the research process namely a systematised decoding of the public space projects policies and rationales that shaped the recent transformation of Lisbon Metropolitan Area With a diverse range of authors actively engaged in academic research and professorship in design practice and in policy oriented roles the book concludes with the outlining of forward looking guidelines policy recommendations and design experimentations This book will be of interest to researchers and students of architecture urbanism landscape architecture and geography The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution CC BY 4.0 license Making Spaces through Infrastructure Marian Burchardt,Dirk Laak,2023-07-04 Infrastructures are fundamental means through which societies create spaces but little is known about the precise ways in which this occurs How have infrastructures animated certain understandings of space How do infrastructures stabilize or undermine the spatial formats in which we live

which shape our everyday practices and which regulate access to services and resources And conversely how do spaces frame the ways infrastructural provision is organized How do existing spaces shape infrastructural development and the scope and forms of access to vital services such as transport and water In this volume historians and sociologists draw on a range of fascinating case studies and provide compelling answers to these questions Exploring among others the provision of irrigation water in nineteenth century Los Angeles the invention of airport transit zones and the infrastructural practices of homeless people in Berlin the book demonstrates how the making of spaces through infrastructure is deeply political Intent on revealing uneven geographies of provision and hierarchies of access the contributors highlight how infrastructures are products of global entanglements
