Animal Cell Biotechnology Methods And Protocols Methods In Biotechnology:

Animal Cell Biotechnology Ralf Pörtner, 2007-04-05 The second edition of this book constitutes a comprehensive manual of new techniques for setting up mammalian cell lines for production of biopharmaceuticals and for optimizing critical parameters for cell culture considering the whole cascade from lab to final production The chapters are written by world renowned experts and the volume s five parts reflect the processes required for different stages of production This book is a compendium of techniques for scientists in both industrial and research laboratories that use mammalian cells for biotechnology purposes

Animal Cell Biotechnology Nigel Jenkins, 1999 Scientists with long refined expertise describe cutting edge techniques for the production of therapeutic proteins and vaccines Capturing the major advances that have occurred in both the science and the technology of these biopharmaceuticals this important book covers the powerful new techniques used in genetically manipulating animal cells optimizing their growth in defined media particularly at large scale avoiding contamination and in the harvesting and analysis of cell products Topics include basic culture facilities and methods molecular methods for gene transfection cell immortalization and cell fusion and techniques for the study of cell growth viability metabolism and productivity *Animal Cell Biotechnology* constitutes a comprehensive manual of state of the art techniques for setting up a cell culture laboratory maintaining cell lines and optimizing critical parameters for cell culture

Single-Use Technology in Biopharmaceutical Manufacture Regine Eibl, Dieter Eibl, 2011-08-08 This book gives an overview of commonly used disposables in the manufacture of biopharmaceuticals their working principles characteristics engineering aspects economics and applications With this information readers will be able to come to an easier decision for or against disposable alternatives and to choose the appropriate system The book is divided into two parts the first is related to basic knowledge about disposable equipment and the second discusses applications through case studies that illustrate manufacturing quality assurance and environmental influence

Mammalian Cell Cultures for Biologics Manufacturing Weichang Zhou, Anne Kantardjieff, 2014-01-15 Volumes are organized topically and provide a comprehensive discussion of developments in the respective field over the past 3 5 years The series also discusses new discoveries and applications Special volumes are dedicated to selected topics which focus on new biotechnological products and new processes for their synthesis and purification In general special volumes are edited by well known guest editors The series editor and publisher will however always be pleased to receive suggestions and supplementary information Manuscripts are accepted in English

Immobilization of Enzymes and Cells José M. Guisán, 2008-02-05 Enzymes and whole cells are able to catalyze the most complex chemical processes under the most benign experimental and environmental conditions In this way enzymes and cells could be excellent catalysts for a much more sustainable chemical industry However enzymes and cells also have some limitations for nonbiological applications fine chemistry food chemistry analysis therapeutics and so on Enzymes and cells may be unstable difficult to handle under nonconventional conditions poorly selective toward synthetic

substrates and so forth From this point of view the transformation from the laboratory to industry of chemical processes catalyzed by enzymes and cells may be one of the most complex and exciting goals in biotechnology For many industrial applications enzymes and cells have to be immobilized via very simple and cost effective protocols in order to be re used over very long periods of time From this point of view immobilization simplicity and stabilization have to be strongly related concepts Over the last 30 years a number of protocols for the immobilization of cells and enzymes have been reported in scientific literature However only very few protocols are simple and useful enough to greatly improve the functional properties of enzymes and cells activity stability selectivity and related properties
