## **Animal Minds Beyond Cognition To Consciousness:**

**Animal Minds** Donald R. Griffin, 1992 *Animal Minds* tackles a question that is both fascinating and important. The overwhelming body of evidence that Donald Griffin has assembled puts beyond reasonable doubt the case for recognizing that many non-human animals are capable of much more sophisticated thinking than many scientists have been prepared to believe. Peter Singer, author of *Animal Liberation*

**Animal Minds** Donald Redfield Griffin, 2001 In *Animal Minds* Donald R. Griffin takes us on a guided tour of the recent explosion of scientific research on animal mentality. Are animals consciously aware of anything or are they merely living machines incapable of conscious thoughts or emotional feelings? How can we tell? Such questions have long fascinated Griffin, who has been a pioneer at the forefront of research in animal cognition for decades and is recognized as one of the leading behavioral ecologists of the twentieth century. With this new edition of his classic book, which he has completely revised and updated, Griffin moves beyond considerations of animal cognition to argue that scientists can and should investigate questions of animal consciousness. Using examples from studies of species ranging from chimpanzees and dolphins to birds and honeybees, he demonstrates how communication among animals can serve as a window into what animals think and feel just as human speech and nonverbal communication tell us most of what we know about the thoughts and feelings of other people. Even when they don't communicate about it, animals respond with sometimes surprising versatility to new situations for which neither their genes nor their previous experiences have prepared them, and Griffin discusses what these behaviors can tell us about animal minds. He also reviews the latest research in cognitive neuroscience, which has revealed startling similarities in the neural mechanisms underlying brain functioning in both humans and other animals. Finally, in four chapters greatly expanded for this edition, Griffin considers the latest scientific research on animal consciousness, pro and con, and explores its profound philosophical and ethical implications.

**How to Study Animal Minds** Kristin Andrews, 2020-06-25 Comparative psychology the multidisciplinary study of animal behavior and psychology confronts the challenge of how to study animals we find cute and easy to anthropomorphize and animals we find odd and easy to objectify without letting these biases negatively impact the science In this Element Kristin Andrews identifies and critically examines the principles of comparative psychology and shows how they can introduce other biases by objectifying animal subjects and encouraging scientists to remain detached Andrews outlines the scientific benefits of treating animals as sentient research participants who come from their own social contexts and with whom we will be in relationship With discussions of science s quest for objectivity worries about romantic and killjoy theories and debates about chimpanzee cognition between primatologists who work in the field and those in the lab Andrews shows how scientists can address the different biases through greater integration of the subdisciplines of comparative psychology

**What are the Animals to Us?** David Aftandilian,2007 In What Are the Animals to Us scholars from a wide variety of academic disciplines explore the diverse meanings of animals in science religion folklore literature and art     **Consciousness Transitions** Hans Liljenström, Peter Århem,2011-10-13 It was not long ago when the consciousness was not considered a problem for science However this has now changed and the problem of consciousness is considered the greatest challenge to science In the last decade a great number of books and articles have been published in the field but very few have focused on the how consciousness evolves and develops and what characterizes the transitions between different conscious states in

animals and humans This book addresses these questions Renowned researchers from different fields of science including neurobiology evolutionary biology ethology cognitive science computational neuroscience and philosophy contribute with their results and theories in this book making it a unique collection of the state of the art of this young field of consciousness studies First book on the topic Focus on different levels of consciousness including Evolutionary developmental and functional Highly interdisciplinary **Human and Animal Minds** Peter Carruthers,2019-11-28 The continuities between human and animal minds are increasingly well understood This has led many people to make claims about consciousness in animals which has often been taken to be crucial for their moral standing Peter Carruthers argues compellingly that there is no fact of the matter to be discovered and that the question of animal consciousness is of no scientific or ethical significance Carruthers offers solutions to two related puzzles The first is about the place of phenomenal or felt consciousness in the natural order Consciousness is shown to comprise fine grained nonconceptual contents that are globally broadcast to a wide range of cognitive systems for reasoning decision making and verbal report Moreover the so called hard problem of consciousness results merely from the distinctive first person concepts we can use when thinking about such contents No special non physical properties no so called qualia are involved The second puzzle concerns the distribution of phenomenal consciousness across the animal kingdom Carruthers shows that there is actually no fact of the matter because thoughts about consciousness in other creatures require us to project our first person concepts into their minds but such projections fail to result in determinate truth conditions when those minds are significantly unlike our own This upshot however doesn't matter It doesn't matter for science because no additional property enters the world as one transitions from creatures that are definitely incapable of phenomenal consciousness to those that definitely are namely ourselves And on many views it doesn't matter for ethics either since concern for animals can be grounded in sympathy which requires only third person understanding of the desires and emotions of the animals in question rather than in first person empathy

**Misrepresenting the Mind** Matthew Francis Barrett,2004 *The Human Use of Animals* Tom L. Beauchamp,2008 The first edition of The Human Use of Animals offered the first set of case studies on animal use through sixteen original previously unpublished essays Whereas the first edition strongly emphasized research issues the second edition now adds material on conservation concerns and the use of animals in entertainment specifically cases on endangered species zoos circuses and sport fighting As with the first edition the cases are presented in an objective and balanced way that will spark reasoned debate about moral issues Extensively revised and updated the second edition maintains a commitment to a discussion of ethical reflection and analysis concerning human interactions with animals **The Quest for Consciousness** Christof Koch,2004 Consciousness is the major unsolved problem in biology Written as an introduction to the field and drawing upon clinical psychological and physiological observations this book seeks to answer questions of consciousness within a neuroscientific framework **Yoga Psychology and the Transformation of Consciousness** Don Salmon,Jan

Maslow,2007-09 From the perspective of yoga psychology the view from infinity even our basest instincts our most mundane acts and our greatest follies can be understood as the limited or distorted expressions of a purposeful compassionate and infinite intelligence Yoga Psychology is based on the writings of Sri Aurobindo the revolutionary poet and philosopher who founded the independence movement in India later led by Mahatma Ghandi     *The Animal Mind* James L. Gould,Carol Grant Gould,1999 In this volume James and Carol Gould go in search of the animal mind Taking a fresh look at the evidence on animal capacities for perception thought and language the Goulds show how scientists attempt to distinguish actions that go beyond the innate or automatically learned They provide captivating beautifully illustrated descriptions of a number of clever and curious animal behaviors some revealed to be more or less preprogrammed some seemingly proof of a well developed mental life     New Dictionary of Scientific Biography Noretta Koertge,2008 Also available online as part of the Gale Virtual Reference Library under the title Complete dictionary of scientific biography
