Iterated Function Systems Antti Käenmäki,2003 Tiivistelm Iteroidun funktiosysteemin rajajoukon rakenteesta ja luonnollisesta mitasta **Generalized Solutions of a System of Differential Equations of the First Order and Elliptic Type with Discontinuous Coefficients** Bogdan Bojarski,2009 **Finer Thermodynamic Formalism – Distance Expanding Maps and Countable State Subshifts of Finite Type, Conformal GDMSs, Lasota-Yorke Maps and Fractal Geometry** Mariusz Urbański,Mario Roy,Sara Munday,2022-06-06 This book consists of three volumes The first volume contains introductory accounts of topological dynamical systems fi nite state symbolic dynamics distance expanding maps and ergodic theory of metric dynamical systems acting on probability measure spaces including metric entropy theory of Kolmogorov and Sinai More advanced topics comprise infi nite ergodic theory general thermodynamic formalism topological entropy and pressure Thermodynamic formalism of distance expanding maps and countable alphabet subshifts of fi nite type graph directed Markov systems conformal expanding repellers and Lasota Yorke maps are treated in the second volume which also contains a chapter on fractal geometry and its applications to conformal systems Multifractal analysis and real analyticity of pressure are also covered The third volume is devoted to the study of dynamics ergodic theory thermodynamic formalism and fractal geometry of rational functions of the Riemann sphere **Positive Transfer Operators And Decay Of Correlations** Viviane Baladi,2000-07-12 Although individual orbits of chaotic dynamical systems are by definition unpredictable the average behavior of typical trajectories can often be given a precise statistical description Indeed there often exist ergodic invariant measures with special additional features For a given invariant measure and a class of observables the correlation functions tell whether and how fast the system mixes i e forgets its initial conditions This book addressed to mathematicians and mathematical or mathematically inclined physicists shows how the powerful technology of transfer operators imported from statistical physics has been used recently to construct relevant invariant measures and to study the speed of decay of their correlation functions for many chaotic systems Links with dynamical zeta functions are explained The book is intended for graduate students or researchers entering the field and the technical prerequisites have been kept to a minimum **Theory and Formal Methods 1993** Geoffrey Burn,Simon Gay,Mark Ryan,2012-12-06 This volume contains the proceedings of the fIrst workshop held by the Theory and Formal Methods Section ofthe Imperial College Department of Computing It contains papers from almost every member of the Section from our long term academic visitors and from those who have recently left us The papers fall into four broad areas semantics concurrency logic specification with some papers spanning a number of disciplines The subject material varies from work on mathematical foundations to practical applications of this theory expressing the Section s commitment to both the foundations of computer science and the application of theory to real computing problems In preparing the workshop and these proceedings care was taken to ensure that there were papers overviewing a field as well as ones whose primary aim was to present new scientifIc

results This had a dual purpose to bring our Section members up to speed in some of the areas being worked on by the Section and to provide the reader of the proceedings not only with a good introduction to many of the specifIc areas being investigated by the Section but also with details of some of our latest results All the papers presented at the workshop were revised following comments made by the workshop participants and all were subsequently reviewed by at least two people before producing the fInal versions contained in this volume     Open Systems and Measurement in Relativistic Quantum Theory Heinz-Peter Breuer,Francesco Petruccione,1999-06-21 This book treats modern aspects of open systems measurement and decoherence in relativistic quantum theory It starts with a comprehensive introduction to the problems related to measuring local and nonlocal observables and the constraints imposed by the causality principle In the articles that follow the emphasis lies on new theoretical models Quantum dynamical semigroups and stochastic processes in Hilbert space are introduced as are dynamical reduction models Further topics include relativistic generalizations of the continuous spontaneous localization model and of the quantum state diffusion model and decoherence and the dynamical selection of preferred basis sets in the framework of continuous measurement theory and of the decoherent histories approach Mathematical aspects of quantum measurement theory and dynamical entropies are also studied from the viewpoint of the operational approach to quantum mechanics     Mathematical Reviews ,2007     **Advances in Applied Probability** ,2003     *Fractal Dimension for Fractal Structures* Manuel Fernández-Martínez,Juan Luis García Guirao,Miguel Ángel Sánchez-Granero,Juan Evangelista Trinidad Segovia,2019-04-23 This book provides a generalised approach to fractal dimension theory from the standpoint of asymmetric topology by employing the concept of a fractal structure The fractal dimension is the main invariant of a fractal set and provides useful information regarding the irregularities it presents when examined at a suitable level of detail New theoretical models for calculating the fractal dimension of any subset with respect to a fractal structure are posed to generalise both the Hausdorff and box counting dimensions Some specific results for self similar sets are also proved Unlike classical fractal dimensions these new models can be used with empirical applications of fractal dimension including non Euclidean contexts In addition the book applies these fractal dimensions to explore long memory in financial markets In particular novel results linking both fractal dimension and the Hurst exponent are provided As such the book provides a number of algorithms for properly calculating the self similarity exponent of a wide range of processes including fractional Brownian motion and L vy stable processes The algorithms also make it possible to analyse long memory in real stocks and international indexes This book is addressed to those researchers interested in fractal geometry self similarity patterns and computational applications involving fractal dimension and Hurst exponent     Recent Developments in Fractals and Related Fields Julien Barral,Athanasios Batakis,Stéphane Seuret,2025-04-18 This volume provides readers with an overview of the most recent developments in the mathematical fields related to fractals It includes both original research contributions as well as surveys from many of the leading experts on modern fractal geometry theory

and applications The contributions contained in the book stem from the conference Fractals and Related Fields IV that was held in 2022 on the Island of Porquerolles France Various aspects of fractal geometry in connection with harmonic analysis geometric measure theory ergodic theory and dynamical systems probability theory number theory functional analysis additive combinatorics embedding theory and signal and image processing are addressed within its pages We hope that the book will be interesting for pure and applied mathematicians in these areas as well as for other researchers curious to discover more about fractals  *Imaging and Vision Systems* Jacques Blanc-Talon,2001 Imaging Vision Systems Theory Assessment Applications Advances in Computation Theory Practice Volume 9  *Discrete and Continuous Dynamical Systems* ,2002  *Nonlinearity* ,1988  Abstracts of Papers Presented to the American Mathematical Society American Mathematical Society,1998  *Dissertation Abstracts International* ,2009  Physics Briefs ,1991  *In Search of the Riemann Zeros* Michel Laurent Lapidus,2008 Formulated in 1859 the Riemann Hypothesis is the most celebrated and multifaceted open problem in mathematics In essence it states that the primes are distributed as harmoniously as possible or equivalently that the Riemann zeros are located on a single vertical line called the critical line  **Comprehensive Dissertation Index** ,1989  **Multi-Chaos, Fractal and Multi-Fractional Artificial Intelligence of Different Complex Systems** Yeliz Karaca,Dumitru Baleanu,Yu-Dong Zhang,Osvaldo Gervasi,Majaz Moonis,2022-06-22 Multi Chaos Fractal and Multi Fractional Artificial Intelligence of Different Complex Systems addresses different uncertain processes inherent in the complex systems attempting to provide global and robust optimized solutions distinctively through multifarious methods technical analyses modeling optimization processes numerical simulations case studies as well as applications including theoretical aspects of complexity Foregrounding Multi chaos Fractal and Multi fractional in the era of Artificial Intelligence AI the edited book deals with multi chaos fractal multifractional fractional calculus fractional operators quantum wavelet entropy based applications artificial intelligence mathematics informed and data driven processes aside from the means of modelling and simulations for the solution of multifaceted problems characterized by nonlinearity non regularity and self similarity frequently encountered in different complex systems The fundamental interacting components underlying complexity complexity thinking processes and theory along with computational processes and technologies with machine learning as the core component of AI demonstrate the enabling of complex data to augment some critical human skills Appealing to an interdisciplinary network of scientists and researchers to disseminate the theory and application in medicine neurology mathematics physics biology chemistry information theory engineering computer science social sciences and other far reaching domains the overarching aim is to empower out of the box thinking through multifarious methods directed towards paradoxical situations uncertain processes chaotic transient and nonlinear dynamics of complex systems Constructs and presents a multifarious approach for critical decision making processes embodying paradoxes and uncertainty Includes a combination of theory and applications with regard to multi chaos fractal and multi fractional as well as AI of different
