Carrier Cab Controls

The following is a description of the gauges, switches, and controls in the carrier cab, along with an explanation of their function and/or operation.

Dash Panel

Located directly in front of the operator, the dash panel contains the following controls and is shown in Figure 1-29.

Note: When the key is turned on, the gauge needles on the coolant temperature, engine oil pressure, air pressure, battery, and fuel gauges (Items 1, 2, 7, 23, & 24 in Figure 1-29) will go to the 12 o'clock position and an indicator light within each gauge will flash as a means of testing the gauge. The needle will return to the normal operating position and the light should go out after a short period of time. If the gauge is not monitoring its respective function, the indicator light will illuminate and the needle will swing back and forth then move and remain at the 12 o'clock position. Repair the problem before driving the crane.
